Features and benefits

SCREWLine: Screw technology for an efficient and versatile product

SCREWLine is the new generation of Clivet liquid chillers with inverter Screw compression technology: high energy efficiency, great operating reliability and maximum choice versatility, with many versions and models for different types of installation.

WDH-iK4

Water Cooled Liquid Chiller with inverter technology

- Range 340 ÷ 1520 kW
- Spray shell & tube evaporator
- Continuous capacity control
- Seasonal efficiency up to 8,60
- Cooling only, heating only or operation with water circuit change-over
- Operation up to + 55°C inlet water temperature to the condenser
- High water temperature +65°C version

Standard unit technical specifications

Compressor

Compact, semi hermetic, helicoidal twin-screw compressors with high efficiency integrated oil separator. The cooling capacity continuous modulation is made by a variable speed motor activated by the inverter integrated in the compressor. The start-up with limited current absorption is achieved by progressively accelerating the compressor with the inverter. The inverter is cooled with the liquid cooler taken from the liquid line. The liquid flow is activated by a solenoid valve and is sent to the inverter cooling plate by a thermostatic valve. Subsequently, the steam generated by the heat exchange is sucked by the screws inside a closed chamber at medium pressure without thereby reducing the compressor suction capacity.

The electronic boards are housed inside the inverter. They, in addition to managing the inverter and the electric motor rotation speed, perform all the functions of protection, monitoring and control of the compressor: oil level, oil temperature, motor temperature, Vi control, oil heater activation, if necessary, liquid injection for the inverter and compressor cooling, check of the operating range by specific HP and LP transducers, communication via MODBUS, operating timing, alarm management. The inverter and electric motor supply is three-phase, the auxiliaries are supplied with single phase line. At the compressor discharge is provided a non-return valve to avoid the counter-rotating during the stop. The emergency internal overpressure valve connects the compressor discharge with suction in case of an extreme pressure drop.

Structure

Structure and base made entirely of sturdy sheet steel with the surface treatment in Zinc–Magnesium painted, that guarantees excellent mechanical characteristics and high corrosion strength over time.

Evaporator

Spray shell & tube evaporator. The exchanger is made of a carbon steel sleeve. The tubes, still anchored to the tubular plate with a mechanical tube expansion, are copper, highly efficient, internally and externally striped in order to optimise thermal exchange. It is also complete with differential pressure switch protecting the water side and coating of closed cell heat insulating material, which keeps condensation from forming and heat exchange with the outside. Removable heads to allow cleaning and maintenance of the exchanger. Maximum operating pressure of the water side of the exchanger: 10 bar. Quick coupling hydraulic connection with grooved joint.

Condenser

Highly efficient shell & tube exchanger. The exchanger is made of a carbon steel sleeve. The tubes, still anchored to the tubular plate with a mechanical tube expansion, are copper, highly efficient, internally and externally striped in order to optimise thermal exchange. It is also complete with differential pressure switch protecting the water side. Removable heads to allow cleaning and maintenance of the exchanger. Maximum operating pressure of the water side of the exchanger: 10 bar. Quick coupling hydraulic connection with grooved joint.

Refrigeration circuit

One or two independent refrigeration circuits made of copper, brazed and factory-assembled, complete with

- anti-acid dehydrator filter with solid cartridge complete with quick-fit connector for refrigerant;
- high-pressure safety pressure switch;
- low pressure transducer;
- refrigerant temperature probe;
- electronic expansion valve;
- high and low pressure gauges;
- high pressure safety valve (safety valve with sealed tap open for inspection);
- low pressure safety valve (safety valve with sealed tap open for inspection);
- liquid flow and humidity indicator;
- cut-off valve on compressor supply circuit;
- cut-off valve on liquid line;

- oil separator;
 - oil recovery circuit;
 - double safety valves with change-over valve
- Suction pipes thermally insulated with highly flexible EPDM rubber closed-cell elastomer insulation. Each cooling circuit is tested under pressure for leaks and is supplied complete with load of refrigerant gas.

Electrical panel

Entirely manufactured and wired in conformity to the EN 60204 standard.

The power section includes:

- door locking main circuit breaker;
- main power supply terminals (400 V/3 Ph/50 Hz);
- insulation transformer for powering the auxiliary circuit (230 V/24 V);
- fuses and thermal relays for protecting the compressors;

The control section includes:

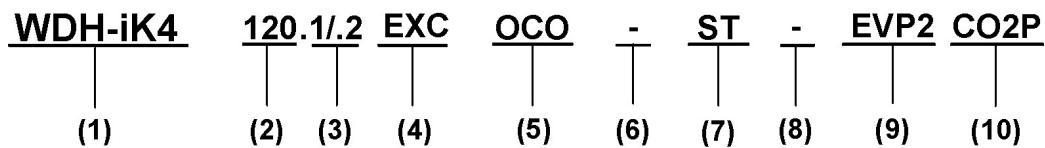

- interface terminal with graphic display;
- set values, error codes and parameters can be displayed;
- proportional-integral-derivative adjustment of water temperature;
- management of unit start-up from local or remote device;
- ON/OFF keys and alarm reset;
- daily, weekly temperature set point and start-up/shutdown scheduler;
- anti-freeze protection water side;
- compressor protection and timer;
- pre-alarm function for water anti-frost and refrigerant gas high pressure functions;
- self-diagnosis system with instant error code visualisation;
- control of compressor start-up automatic rotation;
- visualisation of no. of hours of compressor operation;
- remote ON/OFF control;
- remote relay to signal cumulative alarms;
- demand limit input (absorbed power limit depending on external signal 0÷10V or 4÷20 mA);
- potential-free contacts for compressor status;
- digital input to enable double set point;;
- multifunctional phase monitor;
- refrigerant gas high pressure pre-alarm function (prevents automatic unit shutdown in many cases);
- remote HEAT/COOL command.

All device functions can be replicated with a normal laptop computer connected to the unit via an Ethernet cable and with a browser. All electrical cables are coloured and numbered according to the wiring diagram.

Test

Unit subjected to factory-tested in specific steps and test pressure of the piping of the refrigerant circuit (with nitrogen and hydrogen), before shipping them. After the approval, the moisture contents present in all circuits are analyzed, in order to ensure the respect of the limits set by the manufacturers of the different components.

Unit configuration

(1) Range

WDH = Water Cooled Liquid Chiller with screw compressors
iK4 = SCREWLine⁴ series with screw compressor driven by inverter and refrigerant R513A

(2) Size

120 = Nominal compressor capacity (HP)

(3) Compressors

.1/2 = Number of compressors

(4) Energy version

EXC = EXCELLENCE version

(5) Operation

OCO = Cooling only operation (standard)
OHO = Heating only operation
OHI = Operation with water circuit change-over

(6) High water temperature version

(-) not required High water temperature (standard)
HWT = High water temperature +65°C

(7) Acoustic configuration

ST = Standard acoustic configuration (standard)
EN = Super-silenced acoustic configuration

(8) Low evaporator water temperature

(-) = Low water temperature: not required (standard)
B = Low water temperature, down to -8°C (Brine)

(9) Evaporator

EV2P = 2 pass evaporator (standard)
EV3P = 3 pass evaporator

(10) Condenser

CO2P = 2 pass condenser (standard)
CO3P = 3 pass condenser

AAL	SX evaporator water connections Spray shell & tube evaporator. Complete with differential pressure switch protecting the water side and coating of closed cell with a thickness of 20mm. Removable heads to allow cleaning and maintenance of the exchanger. Maximum operating pressure of the water side of the exchanger: 10 bar. Quick coupling hydraulic connection with grooved joint with exits to the left of the control panel. Standard configuration.
AAR	DX evaporator water connection Spray shell & tube evaporator. Complete with differential pressure switch protecting the water side and coating of closed cell with a thickness of 20mm. Removable heads to allow cleaning and maintenance of the exchanger. Maximum operating pressure of the water side of the exchanger: 10 bar. Quick coupling hydraulic connection with grooved joint with exits to the right of the control panel.
AACT	Opposing evaporator water connections Spray shell & tube evaporator. In case the project evaporator flow is below than the nominal standard unit flow (>7K delta T between input and output), you must use a three pass evaporator on the water side. In this configuration the input connection of the water will be in the standard location (left hovering in front of the control panel) while the output will be on the other side.
CDL	SX condenser water connections Highly efficient shell and tube exchanger. Complete with differential pressure switch protecting the water side. Removable heads to allow cleaning and maintenance of the exchanger. Maximum operating pressure of the water side of the exchanger: 10 bar. Quick coupling hydraulic connection with grooved joint, with exits to the left of the control panel. Standard configuration.
CDR	DX condenser water connections Highly efficient shell and tube exchanger. Complete with differential pressure switch protecting the water side. Removable heads to allow cleaning and maintenance of the exchanger. Maximum operating pressure of the water side of the exchanger: 10 bar. Quick coupling hydraulic connection with grooved joint, with exits to the right of the control panel.
CDCT	Condenser water connections on the opposite sides Highly efficient shell and tube exchanger. In case the project condenser flow is below than the nominal standard unit flow (>7K delta T between input and output), you must use a three steps condenser on the water side. In this configuration the input connection of the water will be in the standard location (left hovering in front of the control panel) while the output will be on the other side.
EHWP	User side water piping antifreeze electric heaters The option makes it possible to avoid the formation of ice the evaporator and to preserve its correct operation. This is an electric heating element insert in the exchanger. It activates if the water temperature drops below a set limit. The device is recommended during the winter when the unit is in stand-by or if the system is not in use for long periods of time. The device is installed and wired built-in the unit.  When the unit is electrically disconnected, the device is not in operation.  The device only protects the water side exchanger. Anti-freeze protection of the plumbing connections is the responsibility of the client.
EHCS	Source side antifreeze electric heaters The option makes it possible to avoid the formation of ice in the condenser and to preserve its correct operation. This is an electric heating element insert in the exchanger. It activates if the water temperature drops below a set limit. The device is recommended during the winter when the unit is in stand-by or if the system is not in use for long periods of time. The device is installed and wired built-in the unit.  When the unit is electrically disconnected, the device is not in operation.  The device only protects the water side exchanger. Anti-freeze protection of the plumbing connections is the responsibility of the client.

Built-in options

IM	20 mm thickness insulation for increased evaporator Increased evaporator insulation with thickness of 20 mm. Ideal solution in case of water production at low temperatures (< 5°C) or for conditions of high air temperature and high humidity.
ISS	Condenser insulation Increased condenser insulation with thickness of 10 mm. Ideal solution in case of high water production to condenser.
MHP	High and low pressure gauges It includes two liquid pressure gauges for the analog measurement of refrigerant pressures on suction and discharge lines of the compressors with pressure sockets installed in the unit in an easily accessible location. The accessory is built-in the unit.
RPR	Refrigerant leak detector Leak detector device built-in installed and placed inside the compressor box, it detects leaks of the internal refrigeration circuit.
FC2	EMC filtering for residential-industrial environment EN 61800-3 cat C2) Reduces electromagnetic interferences. Increase the inverter compressor (VFD) immunity level according to residential-industrial environment requirements (EN61800-3) and allow its compliancy with emissions level required in category C2.
SCP4	Set-point compensation with 0-10 V signal This device enables the set-point to be varied which is pre-set using an external 0÷10 V signal. The device is installed and wired built-in the unit.
SPC1	Set-point compensation with 0-10 V signal This device enables the set-point to be varied which is pre-set using an external 4-20 mA signal. The device is installed and wired built-in the unit.
SPC2	Set-point compensation with outdoor air temperature probe This device enables the set-point to be varied automatically which is pre-set depending on the outdoor air temperature. This device enables the liquid flow temperature to be obtained, which varies depending on external conditions, enabling energy savings throughout the entire system. The device is installed and wired built-in the unit.. ⚠ The device includes a probe controlled remotely from outside to measure the outdoor air temperature (installation to be carried out by the customer). The connection cable length is 16 m.
CONTA2	Energy meter Allows to display and record the unit's main electrical parameters. The data can be displayed with the user interface on the unit or via the supervisor through the specific protocol variables. It is possible to control: voltage (V), absorbed current (A), frequency (Hz), cosfi, power input (kW), absorbed energy (kWh), harmonic components (%) The device is installed and wired built-in the unit.
CMSC9	Serial communication module for Modbus supervisor This enables the serial connection of the supervision system, using Modbus as the communication protocol. It enables access to the complete list of operational variables, commands and alarms. Using this accessory every unit can dialogue with the main supervision systems. The device is installed and wired built-in the unit. ⚠ The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out).
CMSC10	Serial communication module for LonWorks supervisor This enables the serial connection of the supervision system which uses the LonWorks communication protocol. It enables access to a list of operating variables, commands and alarms which comply with the Echelon® standard. The device is installed and wired built-in the unit. ⚠ The configuration and management activities for the LonWorks networks are the responsibility of the client. ⚠ LonWorks technology uses the LonTalk® protocol for communicating between the network nodes. Contact the service supplier for further information. ⚠ The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)

CMSC11**Serial communication module for BACnet/IP supervisor**

This enables the serial connection of the supervision system, using BACnet/IP as the communication protocol. It enables access to the complete list of operational variables, commands and alarms. Using this accessory every unit can dialogue with the main supervision systems.

The device is installed and wired built-in the unit.

- ⚠ The configuration and management activities for the BACnet networks are the responsibility of the client.
- ⚠ The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out).

ECS**ECOSHARE function for the automatic management of a group of units**

The device allows automatic management of units that operate on the same hydraulic circuit, by creating a local communication network.

There are two control modes that can be set via a parameter during the activation stage. They both distribute the heat load on the available units by following the distribution logic to benefit from efficiency levels at part load.

Moreover:

Mode 1 - it keeps all the pumps active

Mode 2 - it activates only the pumps of the unit required to operate

The device allows for rotation based on the criterion of minimum wear and management of units in stand-by. There are various unit sizes. Every unit must be fitted with the ECOSHARE feature. The set of units is controlled by a Master unit. The local network can be extended up to 7 units (1 Master and 6 Slave).

- ⚠ The unit supplied with this device can also be equipped at the same time with the RCMRX option and one of the CMSC9 / CMSC10 / CMSC11 options.

RDVS**Switching valve with dual safety valves**

Allows maintenance or replacement of the safety valve without draining the unit. Two pressure relief valves (each valve is sized according to 13136 clause 6.2) connected via a changeover valve are provided.

Standard configuration.

SDV**Cutoff valve on compressor supply and return**

An option which integrates the supply cutoff valve, which is supplied as standard. The presence of the cock at the intake as well enables the compressors to be isolated and substituted without discharging the refrigerant from within the refrigeration circuit. This means that the extraordinary maintenance activities are facilitated.

Device installed built-in the unit.

Accessories separately supplied

AMRX

Rubber antivibration mounts

Mat in thermoplastic elastomer composed of 4 inner layers. Hardness 45 ShA, thickness 37.5 mm.

Thermoplastic Elastomer is ideal for temperature range -45° C to 110° C

It has a high resistance to aging, pollutants, hydrocarbons, saline mists, UV rays and detergents and is composed of recyclable material.

High degree of thermal and electrical insulation.

AMMX

Spring antivibration mounts

The spring antivibration mounts must be fixed to the heat exchanger support plates are used to dampen the vibrations produced by the unit by reducing the noise transmitted to the structures. They consist of:

- n° 7 springs in harmonic steel UNI EN 10270-1 SH with surface protected by cataphoretic treatment.
- n° 2 "plate" containment bodies made of 5 mm thick galvanized steel plates, coated with thermoplastic with high mechanical resistance, injection molded. The contact surfaces of the plates have deformable non-slip reliefs, which allow the anti-vibration mount to stand for friction. The springs are fixed with a special adhesive in the relative seats provided on the plates.
- n° 1 galvanized steel screw jack to record the level of suspended machine in various points of support.

AMMSX

Anti-seismic spring antivibration mounts

The anti-seismic spring antivibration mounts be secured to the support plates of the exchangers. The containment structure is designed to ensure high resistance to multi-directional forces acting on the surface of the suspended unit in case of earthquakes. They consist of:

- n° 4 springs in harmonic steel UNI EN 10270-1 SH with surface protected by cataphoretic treatment
- n° 8 nylon discs that block the spring to the structure and prevent metal contact
- n° 2 rubber side seals to prevent metallic contact between base and cover insulation and ensure continuity even in the presence of axial thrusts
- n° 2 TCEI M16 side safety screws, to lock the cover to the base guides and prevent the spring from coming out
- n° 1 screw and nut M24 1 to record the fee of the suspended machine
- n° 1 intermediate plate to evenly distribute the load on the springs
- n° 1 base and 1 cover made of sandblasted Fe420 steel, protected by cataphoretic treatment and epoxy powder coated
- n° 1 neoprene pad applied to the base, which features deformable slip, allowing the vibration station by friction

IVMSX

Modulating valve source side

Recommended option in applications with disposable water with relatively low temperatures (well, groundwater, water mains).

The two-way modulating motorised valve is located on the thermal source side and is controlled by the unit.

It operates in conjunction with the refrigeration circuit: the modulation via the 0-10V signal - based on the pressure of the refrigerant in the exchanger on the source side - reduces water consumption and ensures the units stays in the expected operating range.

The valves, if not supplied by CLIVET, must have a fast stroke actuator, with an actuation times of 35 sec.

⚠ Warning: to allow for correct opening and closure the differential pressure value must be at least 200 kPa.

⚠ Option: to be installed outside the unit on the water outlet pipe on the source side. The Customer is responsible for conducting the hydraulic and electrical connection. The Customer is responsible for the 230V AC power supply.

⚠ Option: not compatible with sea water. In these cases fit an intermediate exchanger outside the unit.

RCMRX

Remote control via microprocessor control

This option allows to have full control over all the unit functions from a remote position. It can be easily installed on the wall and has the same aspect and functions of the user interface on the unit.

⚠ All device functions can be repeated with a normal portable PC connected to the unit with an Ethernet cable and equipped with an internet navigation browser.

⚠ The device must be installed on the wall with suitable plugs and connected to the unit (installation and wiring to be conducted by the Customer). Maximum remote control distance 350 m without auxiliary power supply.

⚠ For distances greater than 350 m and in any case less than 700 m it is necessary to install the 'PSX - Mains power unit' accessory.

⚠ Data and power supply serial connection cable n.1 twisted and shielded pair. Diameter of the individual conductor 0.8 mm.

⚠ Installation is a responsibility of the Customer.

Accessories separately supplied

PSX	<p>Mains power supply</p> <p>The device allows the unit and the remote control to communicate with the user interface even when the serial line is longer than 350 m. It must be connected to the serial line at a distance of 350 m from the unit and allows to extend the length to 700 m maximum in total. The device requires an external power supply at 230V AC.</p> <p>⚠ Power supply at 230V AC provided by Customer. ⚠ Installation is a responsibility of the Customer.</p>
IFU2X	<p>Steel mesh strainer on the user side</p> <p>The device stops the exchanger from being clogged by any impurities which are in the hydraulic circuit. The mechanical steel mesh strainer must be placed on the water input line. It can be easily dismantled for periodical maintenance and cleaning. It also includes:</p> <ul style="list-style-type: none">• cast-iron shut-off butterfly valve with quick connections and activation lever with a mechanical calibration lock;• quick connections with insulated casing. <p>⚠ Installation is the responsibility of the Client, externally to the unit. ⚠ Check for the presence of the required hydraulic shut-off valves in the system, in order to undertake periodical maintenance.</p>
IFS2X	<p>Steel mesh strainer on the source side</p> <p>The device stops the exchanger from being clogged by any impurities which are in the hydraulic circuit. The mechanical steel mesh strainer must be placed on the water input line. It can be easily dismantled for periodical maintenance and cleaning. It also includes:</p> <ul style="list-style-type: none">• cast-iron shut-off butterfly valve with quick connections and activation lever with a mechanical calibration lock;• quick connections with insulated casing. <p>⚠ Installation is the responsibility of the Client, externally to the unit. ⚠ Check for the presence of the required hydraulic shut-off valves in the system, in order to undertake periodical maintenance.</p>
IOTX	<p>IoT industrial module for cloud based interoperability & services</p> <p>This device allows the monitoring and the remote control the unit via Clivet Eye, the supervision cloud system for Clivet units. With IoT module (i-LINK) it will be possible to monitor and manage the unit through the mobile app Clivet Eye and the dedicated web page. Among the main functions, for all monitored units they allow to:</p> <ul style="list-style-type: none">• display the main working parameters;• display the alarms;• switch on/off the unit;• change the setpoint;• change the operating mode;• set the daily/weekly start-up or power-off programming of the unit;• create charts of main system parameters trend (via web interface);• display in a map the units monitored by Clivet Eye (via web interface). <p>Web interface at www.cliveteye.com. Clivet Eye app available in Google Play and Apple Store</p> <p>⚠ IoT module to be provided for each unit to be remotely monitored. ⚠ Internet ethernet connection in charge of customer. ⚠ Clivet Eye management is alternative to an external BMS supervision system. ⚠ Installation provided by the Customer.</p>

Configurations

OCO - Cooling only operation (Standard)

Configuration that allows the water - water unit to operate with the thermoregulation active when chilled water is produced at a controlled temperature.

OHO - Heating only operation

Configuration that allows operation as water-water heat pump to produce hot water for civil and industrial use.

OHI - Operation with water circuit change-over

Configuration that allows operation as water-water heat pump to produce hot water for civil and industrial use.

It consists of:

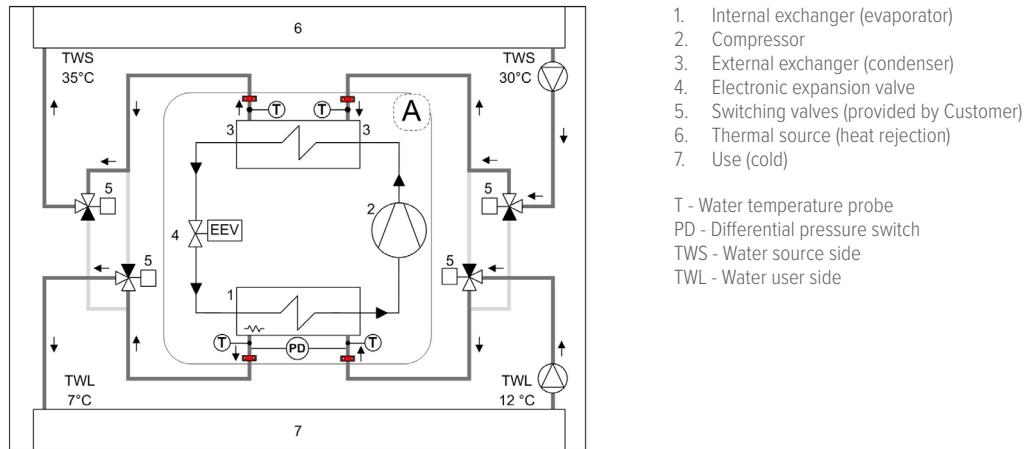

- suitable exchangers with extra-thick closed-cell insulation
- temperature probes at the exchanger's water inlet and outlet.

The system must be fitted with switching valves. The hydraulic switching must be carried out when the unit's operating mode is changed.

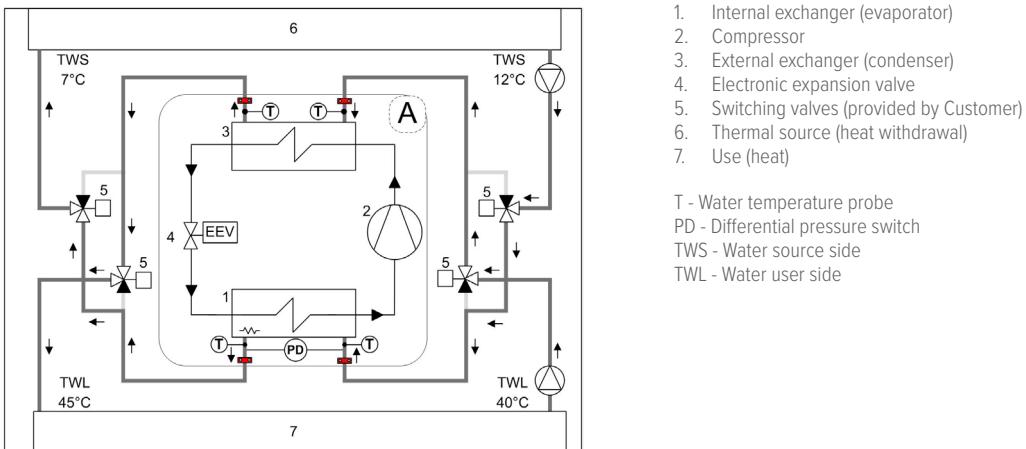

In summer operation mode, the unit automatically controls the evaporation temperature based on the selected set-point value. Likewise, in winter operation mode, the unit automatically adjusts the condensation temperature based on the selected set-point value and checks the temperature on the evaporator to prevent the water from freezing.

- ⚠ The Customer is responsible for installing and managing the hydraulic switching valve
- ⚠ The Customer can change the operating mode using the interface on board the machine or the designated potential-free contact.
- ⚠ Possible non-freeze solutions must be fitted both on the utilisation circuit and the source circuit, as hydraulic switching involves mixing fluids.
- ⚠ During operation with Dry coolers or Evaporative towers, the temperatures of the fluid on the source side need to be always positive as there is no defrosting function.
- ⚠ The device includes two temperature probes to be positioned at the input and output of the connection manifold between the two condensers. The manifolds and the probe installation are provided by the Customer. The connection cable length is 3 m.

Operation mode: cooling

Operation mode: heating

EN - Super-silenced acoustic configuration

Configuration used to increase the unit's silent operation by acting on the source of the noise.
Equipped with sound-proof cover coating which envelop the compressors.

⚠ To assess the quality of the soundproofing benefit, refer to the 'Sound levels' tables.

B - Water low temperature (Brine)

Configuration also known as "Brine". Enables an "unfreezable" solution to be cooled (for example, water and ethylene glycol in suitable quantities) up to a temperature of between +4°C and –8°C.

It includes:

- suitable exchangers with extra-thick closed-cell insulation
- electronic expansion valve, functional calibration and safety devices suitable for particular uses.

⚠ During the selection phase it is necessary to indicate the required operating type, the unit will be optimised on the basis of this: - Unit with single operating set-point (only at low temperature) - Unit with double operating set-point

⚠ The unit in this configuration has a different operating field, which was reported in the previous pages.

⚠ In low temperature operation, some staging steps could not be available.

⚠ The glycol concentration must be chosen based on the minimum temperature the water can reach. The presence of glycol influences pressure drops on the water side and the unit's output as indicated in the table reporting the "correction factors for use with glycol".

Correction factor for water low temperature

	2	0	-2	-4
Cooling capacity factor	0.860	0.803	0.749	0.691
Compressor power input factor	0.896	0.878	0.859	0.840

⚠ The correction coefficients must be applied to condition: internal exchanger water (evaporator) = 12 / 7 °C.

HWT - High water temperature

Enhanced efficiency version in applications with high condenser water temperature:

- chiller operation (configuration OCO) with dry-cooler
- heat Pump operation (configuration OHI / OHO), with leaving temperature extended up to +65°C

Includes.

- dedicated compressor for high condensing temperature;
- condenser designed for high pressures;
- settings and safety equipment: suitable for this application.

The Product is compliant with the Erp (Energy Related Products) European Directive. It includes the Commission delegated Regulation (EU) No 2016/2281, also known as Ecodesign LOT21

1. Data referred to the following conditions: Evaporator water temperature = 12/7 °C. Condenser water temperature = 30/35°C. Evaporator fouling factor = $0.44 \times 10^{-4} \text{ m}^2 \text{ K/W}$
2. The Total Power Input value does not take into account the part related to the pumps and required to overcome the pressure drops for the circulation of the solution inside the exchangers.
3. Data compliant to Standard EN 14511:2022 referred to the following conditions: Evaporator water temperature = 12/7 °C. Condenser water temperature = 30/35°C
4. Data compliant to Standard EN14825:2018
5. Data compliant to Standard EU 2016/2281
6. Data compliant to Standard AHRI 550/590 referred to the following conditions: Evaporator water temperature 12,22°C / 6,7°C. Water flow-rate 0,043 l/s per kW. Condenser water temperature 29,44 °C / 34,61°C. Evaporator fouling factor = $0.18 \times 10^{-4} \text{ m}^2 \text{ K/W}$
7. Data referred to the following conditions: Condenser water temperature = 40/45°C. Evaporator water temperature = 12/7°C. Evaporator fouling factor = $0.18 \times 10^{-4} \text{ m}^2 \text{ K/W}$
8. Data compliant to Standard EN 14511:2022 referred to the following conditions: Condenser water temperature = 40/45°C. Evaporator water temperature = 12/7°C.

1. ISW = Screw compressor with integrated inverter
2. The unit is able to modulate STEPLESS continuously. The following data refers to a continuous operation of the unit.
3. Indicative values for standard units with possible variation +/- 10%. Actual data are shown on the unit's matricular label.
4. S&T = Shell and tube exchanger
5. The calculated water volume to the system does not consider the volume of water contained in the internal exchanger.

Sound levels refer to full load units, in test nominal conditions. The sound pressure level refers to 1 m. from the standard unit outer surface operating in open field. Measurements are carried out according to the UNI EN ISO 9614-1 standard. Sound power and sound pressure data are not Eurovent certified. Data referred to the following conditions: Evaporator water temperature= 12/7°C; Condenser water temperature = 30/35°C.

General technical data

Operating range

To = Evaporator outlet water temperature
 Tws = Condenser outlet water temperature

1. Standard unit operating range
2. Unit operating range in 'Brine - Low water temperature' configuration

Exchanger operating range

INTERNAL EXCHANGER (EVAPORATOR)		
	DPR	DPW
PED (CE)	2150	1000

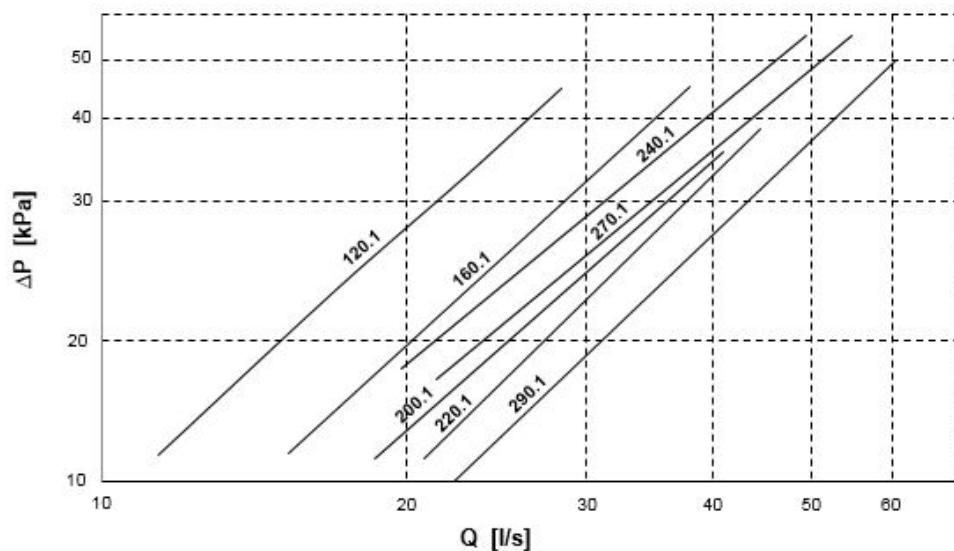

DPr = Maximum operating pressure on refrigerant side in kPa

DPw = Maximum operating pressure on water side in kPa

Overload and control device calibrations

		OPEN	CLOSE	VALUE
High pressure switch	[kPa]	1900	1400	-
Antifreeze protection	[$^{\circ}C$]	3	5,5	-
High pressure safety valve	[kPa]	-	-	2150
Low pressure safety valve	[kPa]	-	-	1500
Max no. of compressor starts per hour	[n°]	-	-	6
Discharge safety thermostat	[$^{\circ}C$]	-	-	120

Evaporator pressure drop - Size 120.1 - 290.1

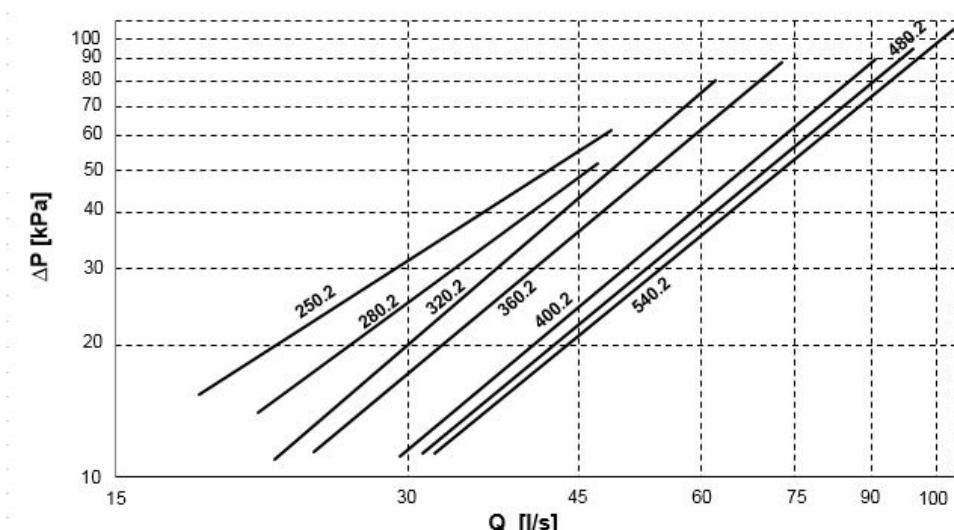

Pressure drops on the water side are calculated considering an average water temperature of 30°C.
Q = water flow-rate (l/s)
DP = pressure drop [kPa]

The water flow rate must be calculated with the following formula:

$$Q \text{ [l/s]} = kWf / (4,186 \times DT)$$

kWf = Cooling capacity in kW
DT = Temperature difference between entering / leaving water

Evaporator pressure drop - Size 250.2 - 540.2

Pressure drops on the water side are calculated considering an average water temperature of 30°C.
Q = water flow-rate (l/s)
DP = pressure drop [kPa]

The water flow rate must be calculated with the following formula:

$$Q \text{ [l/s]} = kWf / (4,186 \times DT)$$

kWf = Cooling capacity in kW
DT = Temperature difference between entering / leaving water

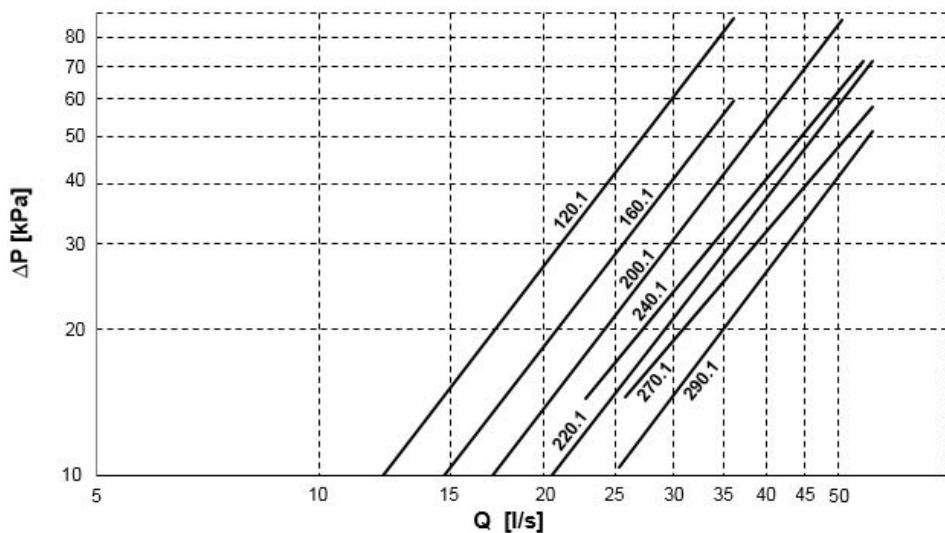

Admissible water flow rates

Min. (Qmin) and max. (Qmax) water flow-rates admissibles for the correct unit operation.

The Product is compliant with the Erp (Energy Related Products) European Directive. It includes the Commission delegated Regulation (EU) No 2016/2281, also known as Ecodesign LOT21

1. Data referred to the following conditions: Evaporator water temperature = 12/7 °C. Condenser water temperature = 30/35°C. Evaporator fouling factor = $0.44 \times 10^{(-4)}$ m² K/W
2. The Total Power Input value does not take into account the part related to the pumps and required to overcome the pressure drops for the circulation of the solution inside the exchangers.
3. Data compliant to Standard EN 14511:2018 referred to the following conditions: Evaporator water temperature = 12/7 °C. Condenser water temperature = 30/35°C
4. Data compliant to Standard EN14825:2018
5. Data compliant to Standard EU 2016/2281
6. Data compliant to Standard AHRI 550/590 referred to the following conditions: Evaporator water temperature 12,22°C / 6,7°C. Water flow-rate 0,043 l/s per kW. Condenser water temperature 29,44 °C / 34,61°C. Evaporator fouling factor = $0.18 \times 10^{(-4)}$ m² K/W
7. Data referred to the following conditions: Condenser water temperature = 40/45°C. Evaporator water temperature = 12/7°C. Evaporator fouling factor = $0.18 \times 10^{(-4)}$ m² K/W
8. Data compliant to Standard EN 14511:2018 referred to the following conditions: Condenser water temperature = 40/45°C. Evaporator water temperature = 12/7°C.

1. ISW = Screw compressor with integrated inverter
2. The unit is able to modulate STEPLESS continuously. The following data refers to a continuous operation of the unit.
3. Indicative values for standard units with possible variation +/- 10%. Actual data are shown on the unit's matricular label.
4. S&T = Shell and tube exchanger
5. The calculated water volume to the system does not consider the volume of water contained in the internal exchanger.

Sound levels refer to full load units, in test nominal conditions. The sound pressure level refers to 1 m. from the standard unit outer surface operating in open field. Measurements are carried out according to the UNI EN ISO 9614-1 standard. Sound power and sound pressure data are not Eurovent certified.

Data referred to the following conditions: Evaporator water temperature= 12/7°C; Condenser water temperature = 30/35°C.

Data referred to the following conditions: Evaporator water temperature= 12/7°C; Condenser water temperature = 30/35°C.

General technical data - HWT Version

Operating range

To = Evaporator outlet water temperature
Tws = Condenser outlet water temperature

1. Standard unit operating range
2. Unit operating range in 'Brine - Low water temperature' configuration

Exchanger operating range

INTERNAL EXCHANGER (EVAPORATOR)

	DPR	DPW
PED (CE)	2400	1000

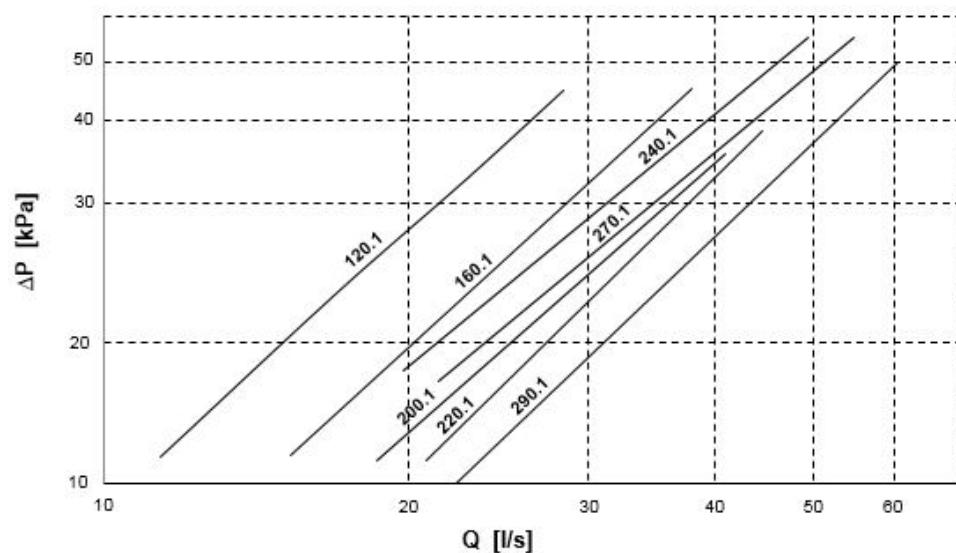

DPr = Maximum operating pressure on refrigerant side in kPa

DPw = Maximum operating pressure on water side in kPa

Overload and control device calibrations

		OPEN	CLOSE	VALUE
High pressure switch	[kPa]	1900	1400	-
Antifreeze protection	[°C]	3	5,5	-
High pressure safety valve	[kPa]	-	-	2400
Low pressure safety valve	[kPa]	-	-	1500
Max no. of compressor starts per hour	[n°]	-	-	6
Discharge safety thermostat	[°C]	-	-	120

Evaporator pressure drop - Size 120.1 - 290.1

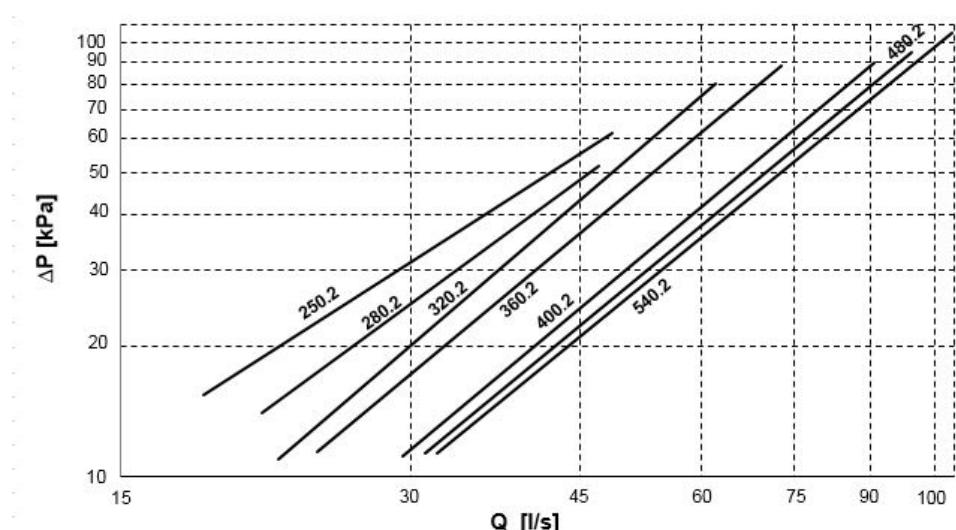

Pressure drops on the water side are calculated considering an average water temperature of 30°C.
Q = water flow-rate (l/s)
DP = pressure drop [kPa]

The water flow rate must be calculated with the following formula:

$$Q \text{ [l/s]} = kWf / (4,186 \times DT)$$

kWf = Cooling capacity in kW
DT = Temperature difference between entering / leaving water

Evaporator pressure drop - Size 250.2 - 540.2

Pressure drops on the water side are calculated considering an average water temperature of 30°C.
Q = water flow-rate (l/s)
DP = pressure drop [kPa]

The water flow rate must be calculated with the following formula:

$$Q \text{ [l/s]} = kWf / (4,186 \times DT)$$

kWf = Cooling capacity in kW
DT = Temperature difference between entering / leaving water

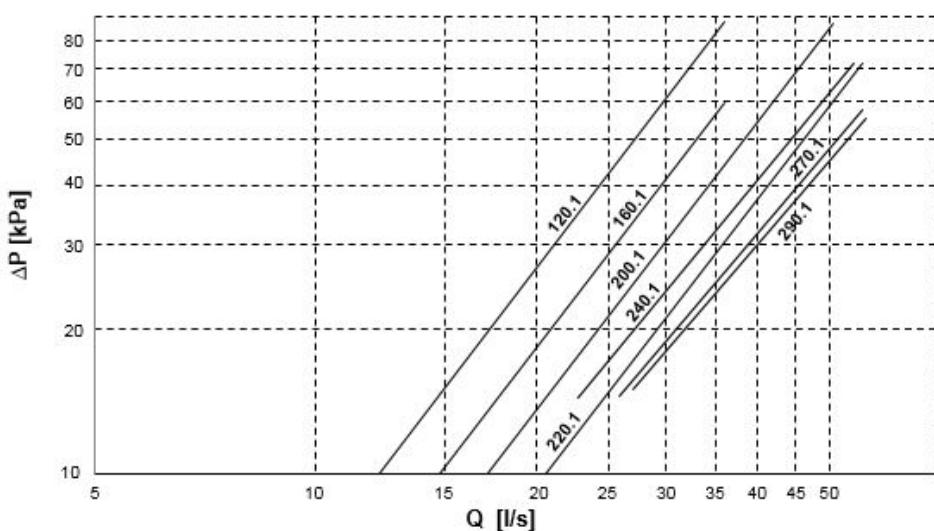

Admissible water flow rates

Min. (Qmin) and max. (Qmax) water flow-rates admissibles for the correct unit operation.

GRANDEZZE	120.1	160.1	200.1	220.1	240.1	270.1	290.1	250.2	280.2	320.2	360.2	400.2	480.2	540.2

General technical data - HWT Version

Condenser pressure drop - Size 120.1 - 290.1

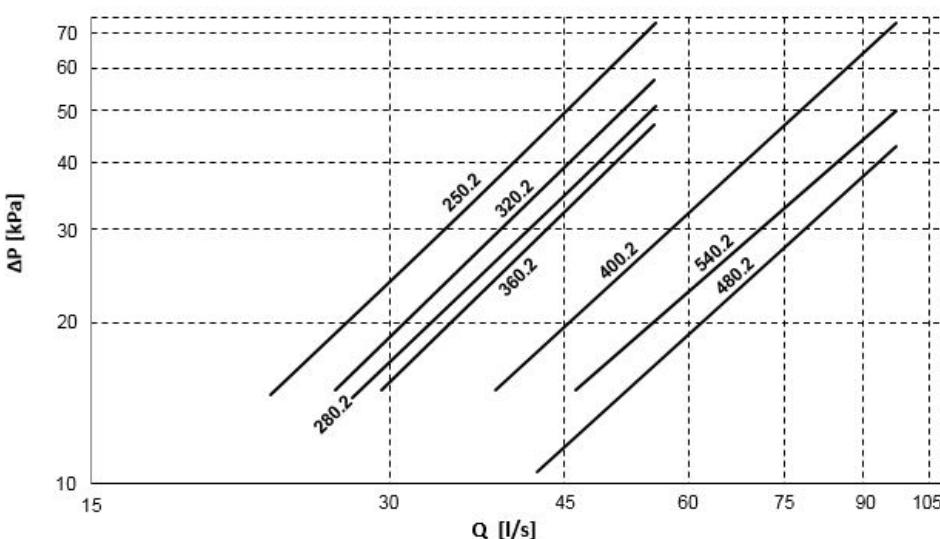

Pressure drops on the water side are calculated considering an average water temperature of 30°C.
 Q = water flow-rate (l/s)
 ΔP = pressure drop [kPa]

The water flow rate must be calculated with the following formula:

$$Q \text{ [l/s]} = kWf / (4,186 \times DT)$$

kWf = Cooling capacity in kW
 DT = Temperature difference between entering / leaving water

Condenser pressure drop - Size 250.2 - 540.2

Pressure drops on the water side are calculated considering an average water temperature of 30°C.
 Q = water flow-rate (l/s)
 ΔP = pressure drop [kPa]

The water flow rate must be calculated with the following formula:

$$Q \text{ [l/s]} = kWf / (4,186 \times DT)$$

kWf = Cooling capacity in kW
 DT = Temperature difference between entering / leaving water

Admissible water flow rates

Min. (Q_{min}) and max. (Q_{max}) water flow-rates admissibles for the correct unit operation.
