CONFIGURATIONS	60

### **About**

Enex Technologies is a transformative world leader in natural and energy efficient cooling, heating, ventilation and refrigeration equipment that began in the 1930s by producing ammonia natural refrigeration equipment, later adding  $CO_2$ , water and propane as natural refrigerants with low global warming potential.

## Pioneers and innovators in natural HVACR since the 1930s

200M€ Revenues

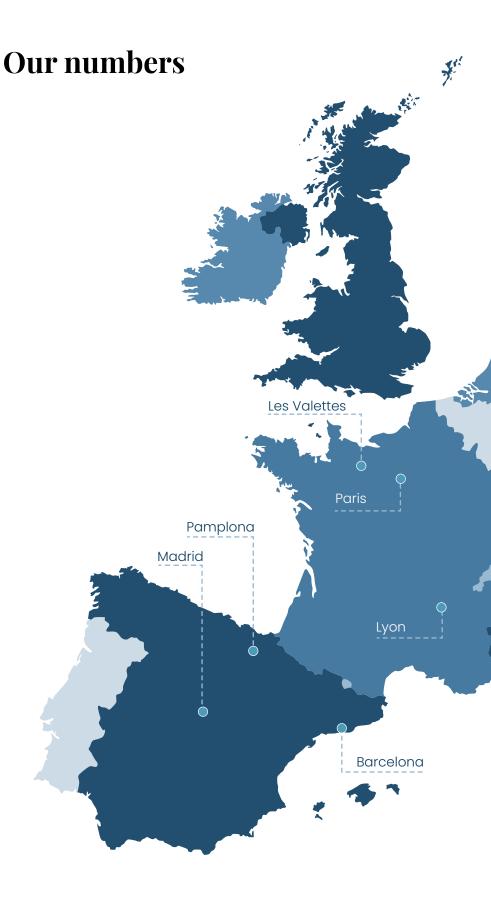

1000+ Employees

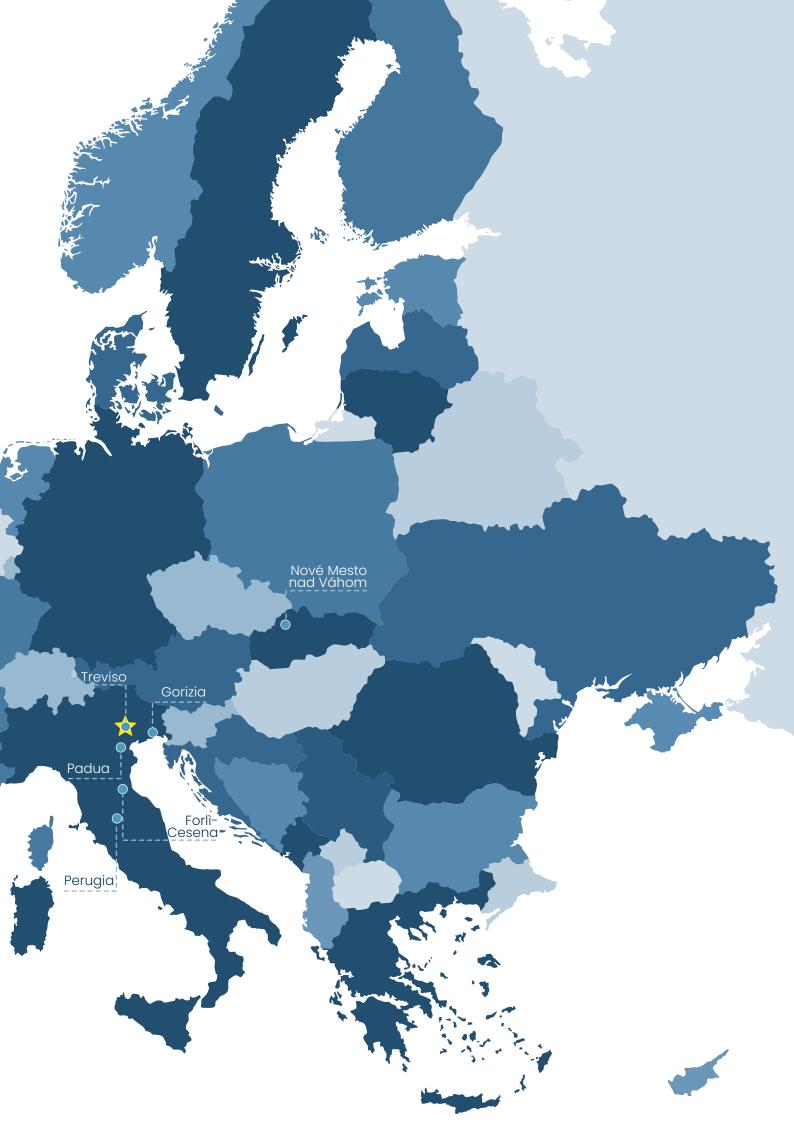

12 Factories

125 Countries

+ Headquarter

 Manufacturing, R&D site and commercial office

### **Our segments**

Our leading natural refrigerant, energy efficiency and energy transition technologies transform the HVACR industry.

### COOLING

Our chillers are designed to operate efficiently with all refrigerants, generating cold water for climatization or industrial processes.

### REFRIGERATION

Our commercial and industrial refrigeration systems are designed for high performance, quality, reliability and carbon footprint reduction through the use of natural refrigerants Ammonia and CO<sub>2</sub>.

### **HEATING**

Our high efficiency heat pump range using natural refrigerant  $CO_2$  is a simple-to use, elegant solution for applications requiring high quantities of sanitary hot water.

## We are driven by strong values to create a better and more sustainable world

#### **ENVIRONMENT**

Buildings consume 40% of the energy used in the developed world. HVACR systems use 60% of the energy in buildings. Our high efficiency solutions are central to reducing global warming, and we strive every day to help our customers reduce their carbon footprint by using natural refrigerants.

### COMMUNITIES

We are a European industrial champion, building clean factories that support new jobs, growth and expansion to new markets.

#### **INNOVATION**

Always leading. From pioneering the efficient and safe use of natural refrigerants to helping the industry move away from gas heat towards systems that use electricity.

### **DIVERSITY & INCLUSION**

At Enex Technologies we ensure that every colleague feels respected, valued and motivated to support our customers, every day.

### THE EMICON

# LABS

### CLIMATIC ROOMS

EMICON has climatic rooms and testing stations where units produced are subject to strict functional and performance tests, with the possibility of simulating the real design climatic conditions. A double hydronic circuit (hot and cold) allows to carry out operation tests on all types of units, both for IT Cooling and hydronic units, packaged, 2 or 4 pipes, air cooled, water cooled and split, up to a cooling capacity of 1500 kW.

It is possible, for our customers, to attend the functioning and performance test. Thanks to some webcams, it is possible to **remotely attend the test.** 

### CHARACTERISTICS

The climatic room is an environment inside of which, by means of auxiliary and heat recovery systems, we create a **controlled microclimate** in terms of air **temperature** and **humidity**, where the heat transfer fluids are treated according to the specific characteristics of the unit.

The types of units that can be tested are air or water cooled units, available as chiller or reversible heat pump versions according to EN14511 standard.

The operating limits of fluid temperature can vary between -5°C and 65°C. The ambient temperature (inside the room) can reach a maximum of 52°C for summer operation and a minimum of -7°C for winter cycle.

### CLOSE CONTROL UNITS

EMICON's Laboratory allows the **performance test** of chilled water and air cooled direct expansion **close control units**, with the possibility to simulate climatic conditions from 15°C to 35°C.

### PROPANE

We recently built a the test area **exclusively** dedicated to chillers and heat pumps operating with natural **Propane refrigerant (R290)**, making us able to carry out performance and functional tests of units with a cooling capacity up to 700 kW both in cooling only and in winter cycle reversible configurations. The use of **ATEX** components, refrigerant leak detection systems, connected to acoustic signals and forced-type exhaust systems guarantee a **high safety degree** in this area.

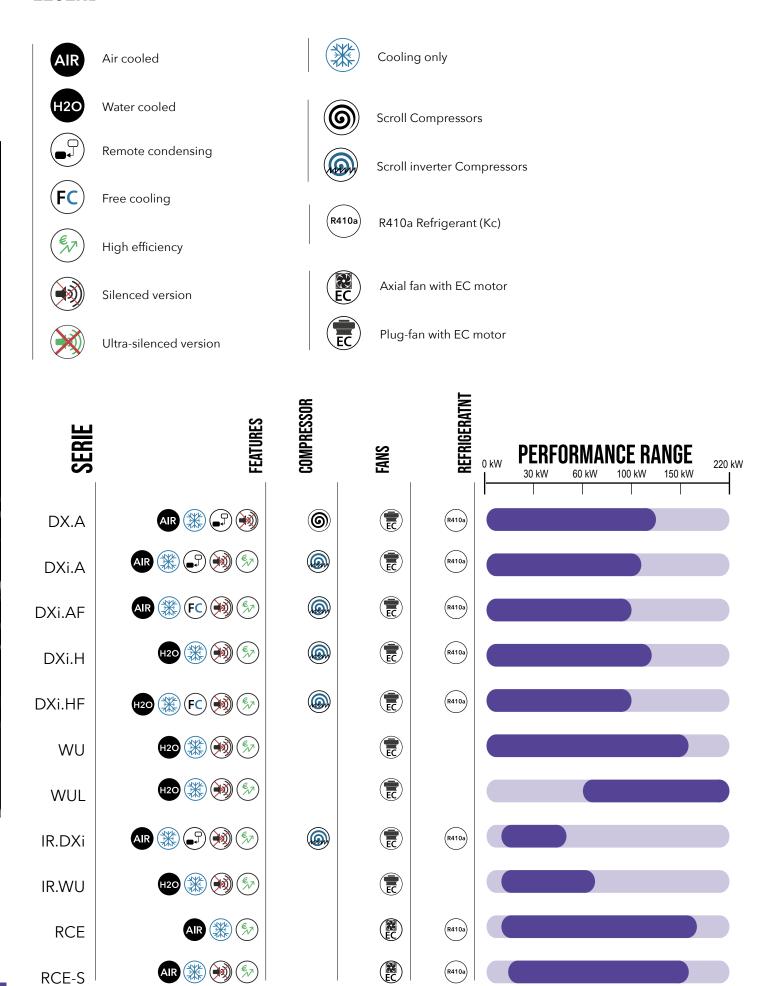

Mission critical **Cooling & Thermal management** has been Emicon core focus since 1984. Our range of precision air conditioning solutions have been designed for a wide range of applications where **close control**, **high precision cooling** is essential, including **data centres**, telecom switching stations, theatres, museum and high technological density environments in general. Throughout its history, the data center and server room has consistently been asked to do more: handle **more capacity**, deliver **more availability** and achieve **more efficiency**. Thanks to the resourcefulness and dedication of the people responsible for managing these business-critical facilities, they have largely responded. The question now is can they continue to do so within the existing paradigms, or are we on the verge of fundamental changes in data center technologies, designs and processes?

The result to this main question nowadays is **EMIBYTE**, the new partner in **IT cooling** with his new series of products entirely designed and produced in the **Emicon factories**.

Reliable, integrated cooling, from chiller and computer room air conditioners, tackles the issues head on to lower costs and reduce downtime risk. We provide all levels of heat removal for different sized rooms and applications. Whether you're building new, retrofitting, or modernizin, achieve a healthy data center environment with our EMIBYTE cooling solutions.

### **LEGEND**

### COMPONENTS

### FULLY CUSTOMIZABLE AND INTUITIVE

### **TOUCH SCREEN DISPLAY**

The new 4.3" touch screen designed to maximise the users system management experience. System usability is enhanced by the web server pages shown on the display relating to each individual controller connected to the network, allowing users to monitor the situation across the entire system from just one single location. Ethernet connectivity makes installation even more practical, without any constraints in terms of location relative to the monitored system.

### **BUILT-IN TEMPERATURE AND HUMIDITY PROBE**

Can share the values read with the colour display making the comprehension of operating data easier.

Micro-USB port

At the front, concealed by a faceplate, for easier access.

### **INVERTER SCROLL COMPRESSOR**

The best solution in terms of variable cooling capacity

### PRECISE TEMPERATURE CONTROL

Inverter compressor-based technology allows close monitoring and control of room temperature.

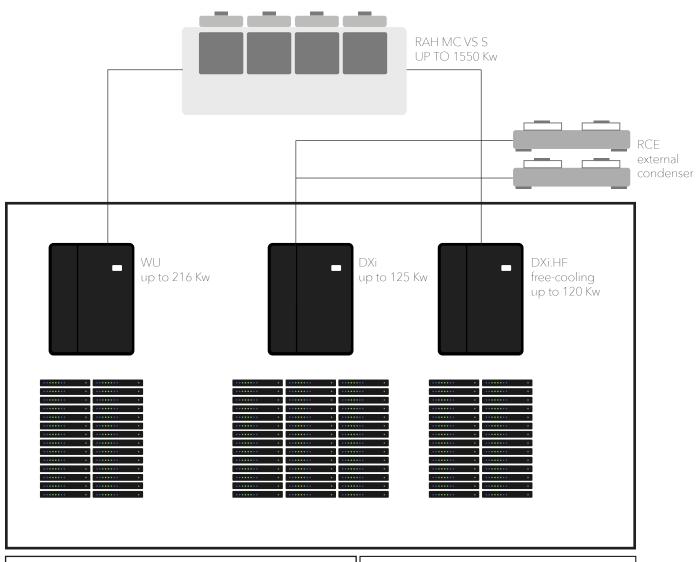

### **EC PREMIUM FAN**

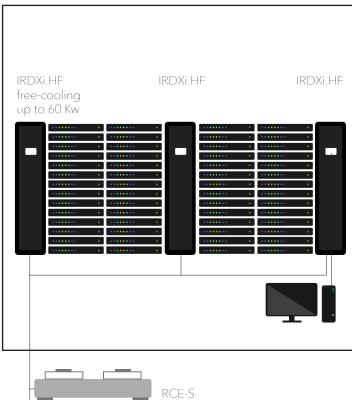

The new generation of Emicon EC Fan 2.0 is the core of EMIBYTE Precision Air Conditioner, significantly minimizing noise levels and increasing the efficiency of the unit.

### **ULTRASONIC HUMIDIFIER**

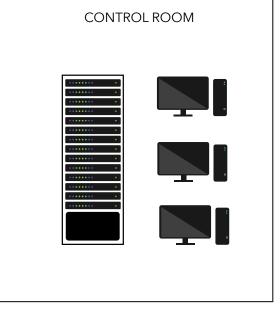

Ultrasonic Humidifier option is the new ultrasound cool mist large room humidifier. It has been developed to control and maintain the desired level of humidity for a specific environment or in any large room or storage area constant.

external condenser (Silenced)

### DXi.HF

### **DIRECT EXPANSION CLOSE CONTROL UNIT**

WATER COOLED WITH ADDITIONAL FREECOOLING COIL AND INVERTER COMPRESSORS

Close control air-conditioners for vertical installations and cooling only, with optional heating by means of heating element, optional humidifier and dehumidifier for precise temperature and humidity control.

Direct expansion FREE-COOLING unit with INVERTER compressor is water cooled and it has to be connected to a remote dry cooler. INVERTER compressor allows the cooling capacity modulation according to the effective thermal load. This solution is suitable for applications with high partial loads and optimises the power input by reducing inrush current.

The unit is also equipped with electronic expansion valve, EC INVERTER fans, condenser and additional Free-cooling coil.

### **VERSIONS**

- **D** Downflow air supply
- **U** Up flow air supply
- **E** Front supply (Displacement)
- **B** Up supply, (Rear return)
- **V** Up supply (Down suction)

### **ACCESSORIES**

- Remote user terminal
- Electric Heating coil
- Humidifier
- Vibration isolation frame with rubber mountings
- Interface electronic board
- Air distribution plenum
- Condensing pump discharge
- Interface card for TCP/IP Protocol
- Longwork, modbus, bacnet
- Touch screen graphic terminal
- Power supply different from standard

#### **Features**

Unit for installing inside or outside the room to be air-conditioned. Maximum resistance to rust thanks to the galvanized sheet metal structures and panels with bevelled corner uprights to enhance its unique, clean and attractive design. The panels are lined with sound-insulating material to limit noise levels. Last generation of BLDC INVERTER compressor designed to deliver maximum cooling efficiency when you ned it most. This latest variable speed compressor technology allows CRAC system manufactures as Emicon to achieve superior performance. New generation EC Inverter centrifugal fan made in hight class technological material with 5 backward curved blades. Impeller with bionic 3D profile thanks to an innovative design in the form of a blade geometry with specific buckling. Special V-shaped rear edge allows a wide characteristic field. Together with the rotating diffuser that opens, exceptional performances of the impeller and the entire system are thus obtained. In combination with the undulated surface of the blade surface, a diffused sound emission takes place which guarantees a very low noise level.

Standard COARSE 60% (ISO EN 16890) EU4/G4 filtering section is fitted. The filter is self-extinguishing. The microprocessor controls the compressor activation times thereby regulating the cooling capacity; it also controls the operating alarms with the possibility of interfacing to supervisor and remote-servicing systems.

Refrigerant circuit consisting of Electronic Expansion Valve, sight glass filter dryer on liquid line, pressure transducer with indication, control and protection functions on low and high refrigerant pressure, high pressure safety switch with manual reset, liquid receiver with accessories. Thanks to the double coil (Free-cooling water and Direct Expansion) the unit provides the highest saving match with full availability of the DX solution. The usage of Free cooling coil and the BLDC Inverter compressor allows maximizing the saving in mixed mode operation, so whenever the free-cooling is not able to fully take the load the compressors can work just to complete the missing cooling needs. Therefore Emicon DXI-HF can provide extremely high energy saving granting the highest availability of the application.

#### Control

Semi-graphic display 132x64 pixel, programmable software, record storage of 200 alarms, general alarm, automatic reset after blackout, integral LAN system, standby management, automatic rotation, serious alarms, operating contemporaneousness, clock function modality.

<sup>(1)</sup> Ambient temperature 24°C, Relative humidity 50%, Water temperature 30/35°C.

(3) Free cooling: Ambient temperature 24°C, Relative humidity 50%, water inlet temperature 7°C, constant water flow

(4) Water temperature 40/45°C, Ambient temperature 20°C, Relative humidity 50%.

### CONFIGURATIONS

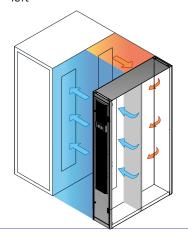

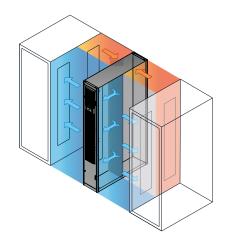

IR30.DXI - LL

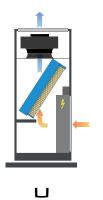

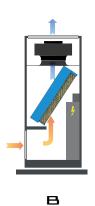

IR30.DXI - CL

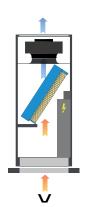

Side air flow right and left (Close Loop)

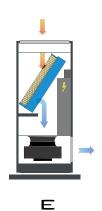

AIR FLOW CONFIGURATIONS: DX / DXI / WU

### Notes
