Clivet is taking part in the EUROVENT certification programme up to 1.500 kW. The products concerned appear in the certified products list of the EUROVENT www.eurovent-certification.com site.

ELFOEnergy Ground Medium²

three solutions to satisfy different installation requirements

GROUND MEDIUM² - COOLING ONLY or HEATING ONLY

WSH-XEE2:

- Water chiller or non-reversible heat pump
- Partial energy recovery

GROUND MEDIUM² - HEAT PUMP

WSHN-XEE2:

- Reversible-cycle heat pump
- Partial energy recovery
- Domestic hot water production with DHW switching valve
-

GROUND MEDIUM² - MULTIFUNCTION

WSHN-XEE2 MF:

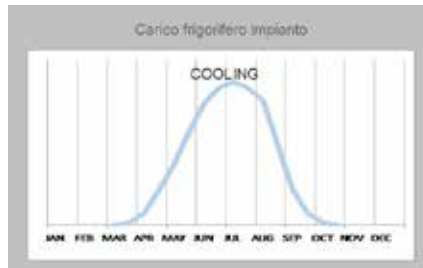

- Reversible-cycle heat pump
- Simultaneous production of hot and chilled water

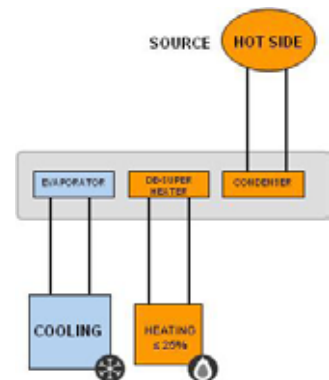

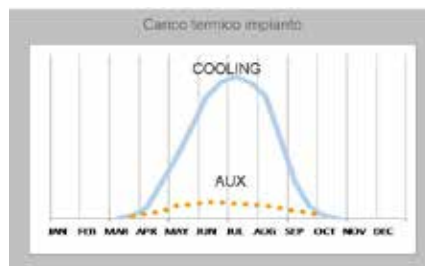

Cooling only unit:

- Production of chilled water (Operation Cooling-only)

- Production of chilled water (Operation Cooling-only)
- Production of domestic hot water from partial recovery (example post-heat)

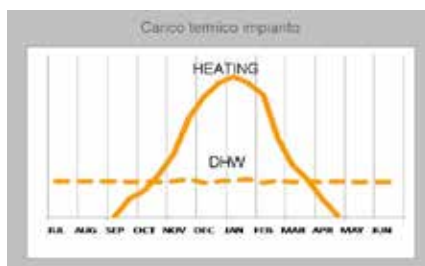

Heating only unit:

- Production of hot water (Operation Heating-only)

- Production of hot water (Operation Heating-only)
- Production of domestic hot water with 3-way valve
- Alternated production for the System or the DHW circuit

Standard unit technical specifications

Compressor

Hermetic Scroll compressors with orbiting spiral, equipped with motor protective device for overtemperatures, overcurrents and excessive temperatures of the supply gas. They are mounted on rubber antivibration mounts and comes with a full oil charge. The compressors come with a thermal and acoustic insulation jacket. An automatic oil heater prevents the oil from being diluted by the refrigerant when the compressor stops. The compressors are connected in TANDEM on a single refrigerating circuit and have a biphasic oil equalisation.

Structure

Supporting structure made with zinc-magnesium sheet metal that ensures excellent mechanical features and high long-term resistance against corrosion.

Panelling

External panelling in zinc-magnesium sheet, prepainted RAL 9003, clad internally with heatproof and soundproof material. The panels are easy to remove when access to the internal components is required.

Cooling side exchanger

Direct expansion heat exchanger with braze welded stainless steel INOX AISI 316 plates and complete with external thermal/anti-condensation insulation.

The exchanger has Victaulic hydraulic connections.

Heating side exchanger

Direct expansion heat exchanger with braze welded stainless steel INOX AISI 316 plates and complete with external thermal/anti-condensation insulation.

The exchanger has Victaulic hydraulic connections.

Refrigeration circuit

Refrigeration circuit with:

- anti-acid dehydrator filter
- liquid flow and moisture indicator
- electronic expansion valve
- safety high pressure switch
- low pressure transducer
- high pressure transducer
- high pressure safety valve
- low pressure safety valve
- refrigerant charge

Nota: l'unità può operare in solo raffreddamento o in solo riscaldamento

Water circuit

Cooling side

- victaulic connection joints
- differential pressure switch, water side
- drain cock (only with hydronic units option)
- minimum circuit charge pressure switch (only with hydronic units option)
- safety valve (only with hydronic units option)

Heating side

- victaulic connection joints
- differential pressure switch, water side
- drain cock (only with hydronic units option)
- minimum circuit charge pressure switch (only with hydronic units option)
- safety valve (only with hydronic units option)

Electrical panel

The capacity section includes:

- main door lock isolator switch
- isolating transformer for auxiliary circuit power supply
- compressor overload protection (in the range between 12.2 and 80.2)
- compressor protection fuse (in the range between 100.2 and 120.2)
- compressor control contactor
- double winding on compressor for reduction of inrush current (in the range between 100.2 and 120.2)

The control section includes:

- interface terminal with graphic display
- display of the set values, the error codes and the parameter index
- keys for ON/OFF control, cool and heat operating modes, alarm reset
- proportional-integral water temperature control
- daily, weekly programmer of temperature set-point and unit on/off
- set-point compensation with 0-10 V signal
- unit switching on management by local or remote (serial)
- antifreeze protection water side
- compressor overload protection and timer
- prealarm function for water antifreeze and high refrigerant gas pressure
- self-diagnosis system with immediate display of the fault code
- automatic rotation control for compressor starts
- compressor operating hour display
- Input for remote ON/OFF control
- potential-free contact for summer / winter change
- dry contacts to control the cumulative alarm signal remotely
- inlet for demand limit (power input limitation according to a 0÷10V external signal)
- double setpoint enabling
- potential-free contacts for compressor status
- phase monitor
- ECOSHARE function for the automatic management of a group of units
- 0÷10V signal output and potential-free contact for auxiliary heater
- enabling of DHW preparation in relation to remote consent
- numeration of electrical panel cables
- designed for natural cooling management (provided by the customer)
- configuration for single on/off pump or service and source side modulating valve

Accessories

- IFWX - Steel mesh strainer on the water side
- SPCX - Set-point compensation with outdoor air temperature probe
- RCTX - Remote control
- AVIBX - Anti-vibration mount supports
- CMMBX - Serial communication module to supervisor (MO-DBUS)
- CMSLWX - LonWorks serial communication module
- BACX - BACnet serial communication module
- AVIBX - Anti-vibration mount supports
- VS2MCX - Cold side 2-way modulating valve
- VS3MCX - Cold side 3-way modulating valve
- VS2MHX - Hot side 2-way modulating valve
- VS3MHX - Hot side 3-way modulating valve
- VACSHX - Heating side DHW switching valve

Heating only unit

(1) Operation

OCO - Cooling only
 OHO - Heating only (standard)
 OHI - Operation with water circuit change-over

(2) Version

OTH4 - Operating conditions above 4°C (standard)
 OTL4 - Operating conditions below 4°C

(3) Voltage

Supply voltage 400/3/50

(4) Cold side hydronic unit

Refer to the diagrams of the hydronic assembly reported

(5) Hot side hydronic unit

Refer to the diagrams of the hydronic assembly reported

(6) Larger units

VS - Standard enclosure
 MOB MAG - Larger units

(7) Power capacitors

(-) not required (standard)
 PFCP - Power factor correction capacitors (cosφ>0.9)

(8) Soft starter

(-) not required (standard)
 SFSTR - Disposal for inrush current reduction (only for sizes from 12.2 to 80.2)

(9) Phase monitor

PM - Phase monitor (standard)
 MF2 - Multi-function phase monitor

(10) Communication modules

(-) not required (standard)
 CMSC8 - Serial communication module to BACnet supervisor
 CMSC9 - Serial communication module to Modbus supervisor
 CMSC10 - Serial communication module to LonWorks supervisor

(11) Cutoff valve

(-) not required (standard)
 SDV - Cutoff valve on compressor supply and return (only for sizes from 12.2 to 80.2)

FUNCTIONALITIES	DIAGRAM HYDRONIC ASSEMBLIES - HEATING ONLY UNIT			
2-PIPE SYSTEM HOT SIDE	Standard unit (Std)	Unit with VARYFLOW + (VARYH)		
2-PIPE SYSTEM COLD SIDE	Standard unit (Std)	Unit with VARYFLOW + (VARYC)	Unit with 3-way modulating valve (VS3MC)	Unit with 2-way modulating valve (VS2MC)

Unit configuration

Cooling only unit

(1) Operation

OCO - Cooling only (standard)
 OHO - Heating only
 OHI - Operation with water circuit change-over

(2) Version

OTH4 - Operating conditions above 4°C (standard)
 OTL4 - Operating conditions below 4°C

(3) Voltage

Supply voltage 400/3/50

(4) Cold side hydronic unit

Refer to the diagrams of the hydronic assembly reported

(5) Hot side hydronic unit

Refer to the diagrams of the hydronic assembly reported

(6) Larger units

VS - Standard enclosure
 MOB MAG - Larger units

(7) Partial recovery device

(-) not required (standard)
 D - Partial energy recovery (only for sizes from 12.2 to 80.2)

(8) Power capacitors

(-) not required (standard)
 PFCP - Power factor correction capacitors (cosfi>0.9)

(9) Soft starter

(-) not required (standard)
 SFSTR - Disposal for inrush current reduction (only for sizes from 12.2 to 80.2)

(10) Phase monitor

PM - Phase monitor (standard)
 MF2 - Multi-function phase monitor

(11) Communication modules

(-) not required (standard)
 CMSC8 - Serial communication module to BACnet supervisor
 CMSC9 - Serial communication module to Modbus supervisor
 CMSC10 - Serial communication module to LonWorks supervisor

(12) Cutoff valve

(-) not required (standard)
 SDV - Cutoff valve on compressor supply and return (only for sizes from 12.2 to 80.2)

FUNCTIONALITIES	DIAGRAM HYDRONIC ASSEMBLIES - COOLING ONLY UNIT			
2-PIPE SYSTEM HOT SIDE	Standard unit (Std)	Unit with VARYFLOW + (VARYH)	Unit with 3-way modulating valve (VS3MH)	Unit with 2-way modulating valve (VS2MH)
2-PIPE SYSTEM COLD SIDE	Standard unit (Std)	Unit with VARYFLOW + (VARYC)		

MOBMAG Larger units

The large cabinet configuration is selected automatically when any hydronic assembly (user or source side) or valve (2-/3-way modulating valve) is selected.

To facilitate the handling, the Large cabinet structure has been revised, the position of components has been changed, and therefore the operations of disassembly are simplified, saving 50% of the time. The instructions for disassembly are reported in detail in the installation and operating manual.

SDV Cutoff valve on compressor supply and return

This option makes it possible to be isolated and substituted without discharging the refrigerant from within the refrigeration circuit. This means that the extraordinary maintenance activities are facilitated.

Option available only for the size from 12.2 to 80.2.

CMSC9 Serial communication module for Modbus supervisor

This enables the serial connection of the supervision system, using Modbus as the communication protocol. It enables access to the complete list of operational variables, commands and alarms. Using this accessory every unit can dialogue with the main supervision systems.

The device is installed and wired built-in the unit.

⚠ The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)

CMSC10 Serial communication module for LonWorks supervisor

This enables the serial connection of the supervision system which uses the LonWorks communication protocol. It enables access to a list of operating variables, commands and alarms which comply with the Echelon® standard.

The device is installed and wired built-in the unit.

⚠ The configuration and management activities for the LonWorks networks are the responsibility of the client.

⚠ LonWorks technology uses the LonTalk® protocol for communicating between the network nodes. Contact the service supplier for further information.

CMSC8 Serial communication module for BACnet supervisor

Allows the serial connection to supervision systems, by using BACnet as communication protocol. It allows the access to the entire list of operation variables, controls and alarms. With this accessory, every unit can communicate with the main supervision systems.

The device is installed and wired built-in the unit.

⚠ The configuration and management activities for the BACnet networks are the responsibility of the client.

⚠ The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)

MF2 Multi-function phase monitor

The multifunction phase monitor controls all phases and their sequence, checks for voltage anomalies (+/-10%), and automatically restores operation of the unit as soon as the power supply returns to normal.

This control allows to:

- protect the internal components of the unit, which are powered by an abnormal voltage, may operate incorrectly or break;
- quickly identify, among the alarms of the unit's components, the real cause of the malfunction due to the sudden change in voltage.

SFSTR Disposal for inrush current reduction

Electronic device that automatically and gradually starts the compressors, thereby reducing the current peak generated in star-triangle start-ups and therefore reduces the mechanical stress on the motor and the electrodynamic stress on the power cables and on the mains.

Option available only for the size from 12.2 to 80.2.

⚠ For size from 100.2 to 120.2 the starting current check is standard. The function is guaranteed by the presence in the motor of the compressor of larger size of a double winding. This solution allows to start the compressor in two stages, obtaining two peaks of reduced current, spaced apart from one another.

PFCP Power factor correction capacitors (cosfi > 0.9)

The component is necessary to lower the phase difference between current and voltage in the electromagnetic components of the unit (e.g. asynchronous motors). The component allows to put the cosfi power factor to values on average higher than 0.9, reducing the network reactive power. This often leads to an economic benefit which the energy provider grants to the final user.

Accessories separately supplied

VS2MHX

Heating side two-way modulating valve

The 2-way source side modulating valve, installed on the source side exchanger outlet, modulates the flow of water in response to a 0-10 V signal from the unit's controller.

2-way modulating valve pressure drops (VS2MHX - VS2MCX)

Q = Water flow rate [l/s]
DP = Pressure drops [kPa]

VS2MCX

Cooling side two-way modulating valve

The 2-way modulating valve, installed on the cold side exchanger inlet, modulates the water flow in response to a 0-10 V signal from the unit's controller.

VS3MHX

Heating side three-way modulating valve

The 3-way modulating valve connects the hot side exchanger inlet and outlet, thus bypassing the exchanger and reducing the flow of water inside it, while keeping the machine's delivery flow constant.

The valve modulation is managed by a 0-10V signal generated by the unit electronic control.

Perdite di carico valvola 3 vie modulante (VS3MHX-VS3MCX)

Q = Water flow rate [l/s]
DP = Pressure drops [kPa]

VS3MCX

Cooling side three-way modulating valve

The 3-way modulating valve connects the cold side exchanger inlet and outlet, thus bypassing the exchanger and reducing the flow of water inside it, while keeping the machine's delivery flow constant.

The valve modulation is managed by a 0-10V signal generated by the unit electronic control.

VACSUX

User side DHW switching valve

The utility side DHW switching valve is also supplied as a separate accessory.

The DHW is called by the closure of the potential-free contact present in the unit electric panel. In heating, the control regulates the 3-way valve commutation because it deviates the flow-rate from installation to DHW storage tank, changes the installation set into the DHW one, thermoregulates and activates or deactivates the compressors depending on the distance from the DHW set. In cooling, the control switches off the compressors due to the mode changing, regulates the 3-way valve commutation and starts the compressors after the safety time owed to on/off.

For sizes from 12.2 to 22.2 the DHW switching valve is 2".

For sizes from 27.2 to 40.2 the DHW switching valve is 2 1/2".

For sizes from 45.2 to 80.2 the DHW switching valve is 3".

For sizes from 100.2 to 120.2 the DHW switching valve is 4".

The DHW switching valve has a IP 40 protection degree.

It is therefore compulsory that client provides a protection for the external liquid valve.

DHW switching valve pressure drops

IFWX

Steel mesh strainer water side

The device prevents any impurity in the water circuit from soiling the exchanger. The stainless steel mesh mechanical strainer must be placed on the water inlet line. It needs to be easy to remove for periodical maintenance and cleaning operations. It can be used on the user and source side.

⚠ Check for the presence of the required hydraulic shut-off valves in the system, in order to undertake periodical maintenance.

Pressure drops of steel mesh strainer water side

Accessories separately supplied

CMMBX Serial communication module to supervisor (Modbus)

This enables the serial connection of the supervision system, using Modbus as the communication protocol. It enables access to the complete list of operational variables, commands and alarms. Using this accessory every unit can dialogue with the main supervision systems.

⚠ The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)

CMSLWX LonWorks serial communication module

This enables the serial connection of the supervision system which uses the LonWorks communication protocol. It enables access to a list of operating variables, commands and alarms which comply with the Echelon® standard.

⚠ The configuration and management activities for the LonWorks networks are the responsibility of the client.

⚠ LonWorks technology uses the LonTalk® protocol for communicating between the network nodes. Contact the service supplier for further information.

BACX BACnet serial communication module

Allows the serial connection to supervision systems by using BACnet-IP as a communication protocol. It allows the access to the entire list of operating variables, controls and alarms. With this accessory every unit can communicate with the main supervision systems.

⚠ The configuration and management activities for the BACnet networks are the responsibility of the client.

⚠ The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)

RCTX Remote control

This option allows to have full control over all the unit functions from a remote position. It can be easily installed on the wall and has the same aspect and functions of the user interface on the unit.

⚠ All device functions can be repeated with a normal portable PC connected to the unit with an Ethernet cable and equipped with an internet navigation browser.

⚠ The device should be installed on the wall using suitable plugs, electrically hooked up and connected to the unit (installation and wiring are the responsibility of the Customer). Max. remote distance 350 m without auxiliary supply.

⚠ Data and power supply serial connection cable n.1 twisted and shielded pair. Diameter of the individual conductor 0.8 mm.

SPCX Set-point compensation with outdoor air temperature probe

The setpoint compensation with air probe changes the calibration of the setpoint in relation to the temperature of the outside air and this reduces energy costs. The probe is connected to the unit's main control module and the maximum length of the connection cable is 20 meters. The sensor must not be influenced by factors that might affect its reading (for instance direct sunlight, contact with external heat sources, etc.) and therefore must be placed in a sheltered place.

AVIBX Anti-vibration mount supports

The rubber antivibration mounts are attached in special housing on the support frame and serve to smooth the vibrations produced by the unit thus reducing the noise transmitted to the support structure.

Sound levels refer to units with full load under nominal test conditions.

The sound pressure level refers to a distance of 1 meter from the outer surface of the unit operating in open field.

Measurements are carried out in compliance with UNI EN ISO 9614-1

The sound power data is not certified by Eurovent.

Data referred to the following conditions:

Entering / leaving exchanger water temperature user side 12/7°C

Entering / leaving exchanger water temperature source side 30/35°C

1. Operating range in which a glycol/water mix must be used, given the water temperature at the cold side exchanger outlet

Electronic control

Description of step start-up control

The electronic control allows to manage the unit depending on the requested load.

The compressor power steps are activated to maximise efficiency from the lowest to the highest setting.

Main controls

Leaving water temperature control with PID algorithm: it keeps the leaving mean temperature to a set value.

- Auto-adaptive switching on differential: guarantees the compressors minimum operating time in systems with low water content.
- Condensation control based on pressure
- Pre-alarms at automatic reset: in case of alarm it is allowed a certain number of restarts before the definitive lock.
- Compressor operating hour calculation
- Compressor start calculation
- Control and continuous management of the compressor operating conditions to guarantee the unit operating also in extreme conditions
- Water temperature check (when used) to avoid the pipe freezing
- Alarm log
- Autostart after voltage drop
- Local or remote control

Unit status display

Attraverso l'interfaccia utente è possibile visualizzare:

- stato e modo di funzionamento delle unità;
- temperatura ingresso/uscita acqua;
- temperature e pressioni del circuito frigorifero;
- segnalazione allarmi e anomalie in corso.

Probe, transducer and parameter display

A user interface dedicated section allows the maintenance or technical assistance personnel to control the unit operating stata. This section is accessible only by specialized personnel.

Management of more units in cascade (ECOSHARE)

It allows the management of several units hydraulically connected up to 1 master and 6 slave maximum.

Units must be of the same type: all reversible heat pumps, or all cool only, or all heat only.

Sizes can be different.

The communication among the units is via a BUS serial cable allowing:

- Supply water set-point setting of the slave units
- Setting of logics that increase the system energy efficiency
- Unit operating hours balancing
- Unit management in case of damage (only on slave unit)
- Hydronic assembly switch-off management of units not used

Remote control (RCTX)

The remote control allows the full control of all unit functions from remote position.

It can be easily installed on the wall and has the same aspect and functions of the user interface on the unit.

Natural Cooling functions

Enabling the Natural Cooling functions, the unit is able to independently manage a system for cold production using source water in the event the temperature conditions of the fluid are favorable.

In this case, the source is managed as if it were the first unit available capacity step and can be used to cover the 100% of the cooling load or also, in integration to the compressors, to cover a part of the cold demand by resetting or reducing the compressor power input. The Natural Cooling installation should include the following additional components (not supplied by Clivet):

1) Natural Cooling water/water exchanger (SCNC in the main scheme): this exchanger shall be suitably dimensioned according to the fluid temperature, user and source side, and according to the pressure drop of the remaining part of the installation and to the unit available static pressure if pumps are not built-in.

2) Two 3-way on/off or equivalent valves (VNCS and VNCU in the main scheme): one on the source circuit and one on the user circuit. Also these have to be suitably dimensioned according to the expected flow rates.

For the correct operation of the Natural Cooling function, the set point control must be set on supply (parameter 436 Tiporeg).

In the installation set up phase it will be necessary to remotely the probe on the source input water upstream of the switching valve source side (VNCS).

The unit can be selected with or without hydronic assemblies user and source side: the system must be able to absorb/manage the flow rate/head variations due to the heater change after the Natural Cooling exchanger insertion and exclusion.

The unit control provides an on/off signal to enable the Natural Cooling by switching the valves.

The Natural Cooling is enabled if the two following conditions are satisfied:

1) the entering water temperature, source side, must be lower than the cooling set point plus a delta defined by parameter 365 DeltaNC (the value can be positive or negative) $[T_{ws_in} < (Set_cooling + \Delta NC)]$

2) the entering water temperature, user side, must be higher than the entering water temperature, source side, plus a delta defined by parameter 366 IsteresiStopNC (the value can be only positive) $[T_{ws_in} < (T_{wu_in} + IsteresiStopNC)]$

If one of these two conditions is not satisfied the Natural Cooling is disabled.

- PDU Differential pressure switch, user side
- PDS Differential pressure switch, source side
- PRLU Installaton load pressure switch adjusted at 0.5 bar
- SC Plate heat exchanger
- VSU Safety valve adjusted at 6 bar (only if pumps or valves are present)
- VSR Exhaust valve
- BTIS Entering temperature probe, source side (to remotely)
- BTOS Leaving temperature probe, source side
- BTIU Entering temperature probe, user side
- BTOU Leaving temperature probe, user side
- VNCS Natural Cooling valve, source side (provided by the Customer)
- VNCU Natural Cooling valve, user side (provided by the Customer)
- SCNC Natural Cooling exchanger (provided by the Customer)

Configurations

Cold side hydronic unit

Standard unit (-)

Configuration without cold side hydronic assembly, equipped with components as described on the water diagram key.

All water fittings are Victaulic type. It is possible to control an external pump by an on/off or 0-10V signal.

Cold side exchanger pressure drop curves - OTH4 - Operating conditions above 4°C

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow rate[l/s]
DP = Pressure drops [kPa]

To the cold side exchanger pressure drops must be added the pressure drops of the steel mesh mechanical filter that must be placed on the water input line. It is a device compulsory for the correct unit operation, and it is available as accessory IFWX.

Admissible cold side water flows - OTH4 - Operating conditions above 4°C

Min. (Qmin) and max. (Qmax) water flow-rates admissible for the correct unit operation.

Configurations

Cold side hydronic unit

Unit with VARYFLOW + (VARYC)

Configuration with 2 centrifugal electric pumps arranged in parallel and controlled by inverter, with housing and impeller made with AISI 304 stainless steel, and components as described on the water diagram key. All water fittings are Victaulic type. The electric pumps are equipped with three-phase electric motor with IP55-protection and complete with thermoformed insulated casing.

The control, modulates the water flow-rate keeping constant the delta T.

If the water temperature is in critical conditions, it allows to extend the unit operating ranges guaranteeing its operating, automatically reducing the water flow-rate.

In the event of one of the two pumps is temporarily unavailable, it guarantees about the 80% of the nominal flow-rate.

Configurations

Cold side hydronic unit

Unit with 3-way modulating valve (VS3MC)

Configuration with one cold side 3-way modulating valve and components as described on the water diagram key.

All water fittings are Victaulic type.

The 3-way modulating valve connects the cold side exchanger inlet and outlet, thus bypassing the exchanger and reducing the flow of water inside it, while keeping the machine's delivery flow constant.

The valve modulation is managed by a 0-10V signal generated by the unit electronic control.

Available only for the size from 12.2 to 80.2.

Cold side 3-way modulating valve pressure drops

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow rate [l/s]
DP = Pressure drops [kPa]

Cold side water diagram

- IN = Cold side inlet
- OUT = Cold side outlet
- SP = Circuit charging pressure switch, calibrated to 0.7 bar
- VS = Safety valve calibrated to 6 bar
- VS3MC = Hydronic unit with cold side 3-way modulating valve
- PD = Differential pressure switch
- VSR = Relief valve
- SC = Plate heat exchangers

Cold side hydronic unit

Unit with 2-way modulating valve (VS2MC)

Configuration with one cold side 2-way modulating valve and components as described on the water diagram key.

All water fittings are Victaulic type.

The 2-way modulating valve, installed on the cold side exchanger inlet, modulates the water flow in response to a 0-10 V signal from the unit's controller.

Available only for the size from 12.2 to 80.2.

Cold side 2-way modulating valve pressure drops

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow rate [l/s]
DP = Pressure drops [kPa]

Cold side water diagram

- IN = Cold side inlet
- OUT = Cold side outlet

- VS2MC = Hydronic unit with cold side 2-way modulating valve
- PD = Differential pressure switch
- VSR = Relief valve
- SC = Plate heat exchangers

Configurations

Cold side hydronic unit

Unit with partial energy recovery (D)

Configuration with one recovery side brazed stainless steel (316 AISI) plate exchanger, and components per the legend of the enclosed plumbing circuit diagram. All water fittings are Victaulic type.

This configuration also permits free hot water production only during the chiller cycle, thanks to partial recovery of condensation heat which would otherwise be dissipated by the hot side heat exchanger.

It is possible to recovery about 1/4 of the unit rejected heating capacity equal to the sum of the cooling capacity and the compressor power input.

If cold water production is not requested, the unit can not produce hot water.

Option available only for the size from 12.2 to 80.2.

The heating capacity request is made by the digital contact enabling, that activates the pump recovery side (outside the unit).

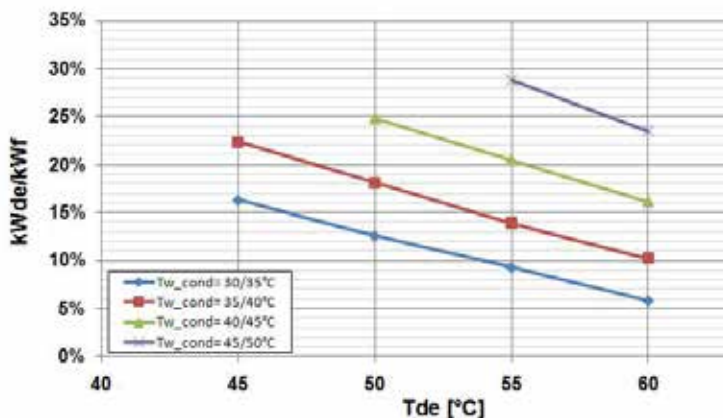

Desuperheater pressure drops

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow rate [l/s]
DP = Pressure drops [kPa]

Partial recovery heating capacity

kWde/kWf = Potenza termica/Potenzialità frigorifera [%]
Tde [°C] = Temperatura uscita acqua scambiatore recupero (ΔT=5°C)
Temperatura uscita acqua scambiatore utilizzo = 7°C

Recovery side water diagram

IN = Ingresso lato recupero
OUT = Uscita lato recupero
SC = Scambiatori di calore a piastre

Hot side hydronic unit

Standard unit (-)

Configuration without hydronic assembly, equipped with components as described on the water diagram key.

All water fittings are Victaulic type.

It is possible to control an external pump by an on/off or 0-10V signal.

Hot side exchanger pressure drop curves

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow rate [l/s]
DP = Pressure drops [kPa]

To the hot side exchanger's pressure drop we must add the pressure drop of the steel mesh filter installed on the water intake line. This device is essential to the unit's proper operation, and is available as accessory IFWX.

Admissible hot side water flows

Min. (Qmin) and max. (Qmax) water flow-rates admissibles for the correct unit operation.

Absorption curves Size 19.2 - 22.2

Q = Water flow rate [l/s] Pa = Electrical power draw [kW]

Available pressure Size 27.2 - 35.2

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

Absorption curves Size 27.2 - 35.2

Q = Water flow rate [l/s] Pa = Electrical power draw [kW]

Available pressure Size 40.2 - 45.2

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

Absorption curves Size 40.2 - 45.2

Q = Water flow rate [l/s] Pa = Electrical power draw [kW]

Configurations

Unit with VARYFLOW + (VARYH)

Available pressure Size 55.2 - 60.2

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

Absorption curves Size 55.2 - 60.2

Q = Water flow rate [l/s] Pa = Electrical power draw [kW]

Available pressure Size 70.2 - 80.2

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

Absorption curves Size 70.2 - 80.2

Q = Water flow rate [l/s] Pa = Electrical power draw [kW]

Available pressure Size. 100.2

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

Absorption curves Size 100.2)

Q = Water flow rate [l/s] Pa = Electrical power draw [kW]

Available pressure Size 120.2

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

Absorption curves Size 120.2

Q = Water flow rate [l/s] Pa = Electrical power draw [kW]

Hot side hydronic unit

Unit with 3-way modulating valve (VS3MH)

Configuration with 1 hot side 3-way modulating valve and components as described on the water diagram key. The 3-way modulating valve connects the hot side exchanger inlet and outlet, thus bypassing the exchanger and reducing the flow of water inside it, while keeping the machine's delivery flow constant. The valve modulation is managed by a 0-10V signal generated by the unit electronic control. Available only for the size from 12.2 to 80.2.

Hot side 3-way modulating valve pressure drops

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow rate [l/s]
DP = Pressure drops [kPa]

Hot side water diagram

IN = Hot side inlet
 OUT = Hot side outlet
 SP = Circuit charging pressure switch, calibrated to 0.7 bar
 VS = Safety valve calibrated to 6 bar
 VS3MH = Hydronic unit with hot water side 3-way modulating valve
 PD = Differential pressure switch
 VSR = Relief valve
 SC = Plate heat exchangers

Configurations

Hot side hydronic unit

Unit with 2-way modulating valve (VS2MH)

Configuration with 1 hot side 2-way modulating valve and components as described on the water diagram key. All water fittings are Victaulic type. The 2-way modulating valve, installed on the hot side exchanger inlet, modulates the water flow in response to a 0-10 V signal from the unit's controller. Available only for the size from 12.2 to 80.2.

Hot side 2-way modulating valve pressure drops

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow rate [l/s]
DP = Pressure drops [kPa]

Hot side water diagram

- IN = Hot side inlet
- OUT = Hot side outlet
- SP = Circuit charging pressure switch, calibrated to 0.7 bar
- VS = Safety valve calibrated to 6 bar
- VS2MH = Hydronic unit with hot side 2-way modulating valve
- PD = Differential pressure switch
- VSR = Relief valve
- SC = Plate heat exchangers

Heating only unit

Heating - OTH4 Operating conditions above 4°C
