Features and benefits

LARGE EVO is the new generation of air cooled liquid chillers and heat pumps, equipped with Full DC Inverter technology and R-32 refrigerant with low environmental impact, designed for outdoor installation.

WiSAT-YEE1

Air cooled chiller with full DC inverter technology and R-32 refrigerant

- Range 110 ÷ 252 kW
- Excellence / Premium Version
- Seasonal efficiency (SEER) 5.16/4.90
- Operating with 48°C of outdoor air temperature
- Operating with -20°C of outdoor air temperature
- Full aluminium microchannel coils
- Partial recovery of the condensing heat
- Plate exchanger
- 2 refrigeration circuits

WiSAN-YEE1

Air cooled reversible heat pump with full DC inverter technology and R-32 refrigerant

- Range 115 ÷ 233 kW
- Seasonal efficiency (SCOP) up to 4,22
- Seasonal efficiency (SEER) up to 4.51
- Operating with 48°C of outdoor air temperature in cooling
- Operating with 48°C of outdoor air temperature in heating
- Hot water production up to 60°C
- Copper/aluminum condensing coil
- Partial recovery of the condensing heat
- Plate exchanger
- 2 refrigeration circuits

The LARGE EVO series is available from 110 kW up to 252 kW in two different energy versions.

EXCELLENCE (EXC) with high levels of efficiency both in full load and partial load operation while maintaining very silent operation
PREMIUM (PRM) most effective and valuable solution both in terms of capital investment and running cost thanks to competitive efficiency and enhanced delivered capacity by each size.

Energy Efficiency

SEER up to 5,34 which makes it extremely competitive
Capacity modulation from 20% to 100%.

Extensive operating limits

Outdoor temperature	max	min
Cooling	48°C	-20°C
Outlet water temperature	max	min
Cooling	20°C	-8°C

Functionality

- Climatic compensation with external temperature
- Double set-point management
- SG Ready
- EVU lock ready (remote on/off)
- Demand limit

Acoustic configuration

Three sound configurations levels:

- Standard acoustic configuration
- Silenced acoustic configuration (-3 dB(A))
- Super-silenced acoustic configuration (-6 dB(A))

Application versatility

All the main system components are supplied on the unit, ensuring maximum manufacturing reliability and easy installation:

- Hydropack with 1 inverter pump, low or high head
- Hydropack with 1 on/off pump, low or high head
- Hydropack with 2 inverter pumps in duty/stand-by configuration, low or high head
- Hydropack with 2 on/off pumps in duty/stand-by configuration, low or high head
- System storage tank
- Partial energy recovery

Cascade management

LARGE EVO is designed to connect up to 8 units in a local network, reaching a maximum unit capacity of 2016 kW.

Standard unit technical specifications

Compressor

Size 45.4 - 50.4 EXC / 45.4 - 55.4 PRM

Inverter-controlled rotary hermetic compressor fitted with a motor protection device for overheating, overcurrents and excessive temperatures of the supply gas. It is installed on rubber antivibration mounts and comes with a full oil charge. The compressor is wrapped in a sound-absorbing hood, that reduces its sound emissions. A crankcase heater with automatic activation prevents the refrigerant from diluting the oil when the compressor stops.

Size 55.4 - 60.4 EXC / 60.4 PRM

Circuit 1

Inverter-controlled rotary hermetic compressor fitted with a motor protection device for overheating, overcurrents and excessive temperatures of the supply gas. It is installed on rubber antivibration mounts and comes with a full oil charge. The compressor is wrapped in a sound-absorbing hood, that reduces its sound emissions. A crankcase heater with automatic activation prevents the refrigerant from diluting the oil when the compressor stops.

Circuit 2

Inverter-controlled hermetic Scroll compressor with steam injection fitted with a motor protection device for overheating, overcurrents and excessive temperatures of the supply gas. It is installed on rubber antivibration mounts and comes with a full oil charge. The compressor has a sound blanket, that reduces its sound emissions and thermally insulates it.

Size 65.4 - 90.4 EXC / 65.4 - 90.4 PRM

Inverter-controlled hermetic Scroll compressor with steam injection fitted with a motor protection device for overheating, overcurrents and excessive temperatures of the supply gas. It is installed on rubber antivibration mounts and comes with a full oil charge. The compressor has a sound blanket, that reduces its sound emissions and thermally insulates it.

Structure

Supporting structure and base made entirely of sturdy sheet steel, 12/10 thick, with hot-dip galvanised surface treatment and parts in full view painted with polyester powder RAL9001, which guarantees excellent mechanical characteristics and high corrosion resistance over time.

Panelling

External panelling made of sheet steel, 12/10 thick, with hot-dip galvanised surface treatment and painted with polyester powder RAL9001 that guarantees greater corrosion resistance in outdoor installations and eliminates the need for periodic painting. The panels can be easily removed to fully access internal components.

Internal exchanger

Direct expansion heat exchanger, braze-welded AISI 316 stainless steel plates, in pack without seals using copper as the brazing material, with low refrigerant charge and large exchange surface, complete with:

- 17 mm thick external no-condensation thermal insulation in sintered expanded polypropylene;
- antifreeze heater to protect the water side exchanger, preventing the formation of frost if the water temperature falls below a set value.

External exchanger

Full aluminium microchannel coil. The entire exchanger (tubes, fins and manifolds) is made of aluminum and welded into a single body through a special brazing technology in a controlled-temperature chamber. The fins have a special corrugated surface to ensure maximum heat exchange efficiency. The special flat configuration of the pipes reduces the section that opposes to the air flow, limiting the pressure drops and maximizing the surface. The total refrigerant charge into the microchannel coil is reduced by 40% compared to an equivalent copper coil.

Fan

Axial fans with sickle-shaped blades made of ABS ASG-20 resin reinforced with 20% glass fibre, directly coupled to the electronically controlled motor (IP23), driven by the continuous magnetic switching of the stator. The brushless technology and the special power supply increase both the lifecycle and the efficiency. Consumption is thus reduced by as much as 50%. The fans are housed in aerodynamically shaped nozzles to increase efficiency and minimise noise levels and are fitted with accident prevention grilles. Both fans and grilles are designed with CFD technology. Supplied with variable speed control.

Refrigeration circuit

Two independent refrigeration circuits made of copper, brazed and factory-assembled, complete with:

- electronic expansion valve;
- safety high pressure switch,
- low pressure safety switch;
- oil separator;
- suction separator;
- high pressure transducer;
- safety thermostat against compressor drain overheating;
- temperature sensors;
- low pressure safety valve.

Size 55.4 - 90.4 EXC / 60.4 - 90.4 PRM

- economizer exchanger

Electrical panel

The power section includes:

- main disconnecting switch;
- general protection fuses;
- insulation transformer for powering the auxiliary circuit;
- auxiliary component protection fuses;
- AC filter on power supply
- power supply phase sequence protection;
- protection for compressor over current;
- protection for compressor overload;
- sensor malfunction protection;
- phase monitor.

The control section includes:

- compressor overload protection and timer;
- relay for remote cumulative fault signal;
- condenser control;
- dry contact for remote on-off control;

The control keypad includes:

- interface terminal with graphic display;
- multifunction keys for ON/OFF control;
- alarms display and reset;
- daily or weekly schedule;
- power output for remote control;
- serial port with Modbus outlet (RS 485) for remote communication.

Water circuit

- temperature sensors;
- drain valve;
- antifreeze heaters to protect the water side exchanger to prevent ice from forming if the water temperature drops below the pre-set value;
- differential pressure switch, water side;
- relief valve.

Test

Unit subjected to factory-tested in specific steps and test pressure of the piping of the refrigerant circuit (with nitrogen and hydrogen), before shipping them.

Standard unit technical specifications

Unit equipment with outdoor air low temperatures

MINIMUM OUTDOOR AIR TEMPERATURE	OPERATING UNIT COOL*	UNIT IN STAND-BY ⁽⁵⁾ (fed unit)	UNIT IN STORAGE (unit not fed)
+11°C	1		
+2°C	2		
-5°C	4		
-7°C	3		
-10 °C	4		
From -10°C to -20°C		✓ STANDARD UNIT	✓ STANDARD UNIT ✓ STANDARD UNIT ⁽⁶⁾
From -20°C to -30°C		✓ NOT POSSIBLE	✓ WATER EMPTY UNIT OR WITH AN APPROPRIATE GLYCOL PERCENTAGE ✗ NOT SUITABLE: BUILT-IN PUMPS NOT POSSIBLE

Data referred to the following conditions:

*chilled water production:

cold side exchanger water = 12/7°C

1. Part load unit and air speed equal to 1 m/s.
2. Part load unit and air speed equal to 0.5 m/s.
3. Part load unit and outdoor air temperature at rest.
4. Full load unit and outdoor air temperature at rest.

(5) The water pumping unit must be fed and connected to the unit according to the manual.

(6) Unit without water or containing water with an appropriate quantity of glycol.

At the unit start-up the water temperature or water with glycol must be inside the operating range indicated in the "Operating range" graph.

To know the water freezing temperature on varying the glycol percentage refer to the specific 'Correction factors for glycol use' table.

⚠ Air conditions which are at rest are defined as the absence of air flowing towards the unit. Weak winds can induce air to flow through the exchanger and air-levels which can cause a reduction in the operating range.

In the presence of predominant winds it is necessary to use suitable windbreak barriers.

⚠ The unit, with an outdoor air temperature on average lower than -10°C, can remain stored for a maximum of 1 month.

Unit configuration

WiSAT-YEE1	45	.4	EXC/PRM	SC	CCM	VENDC	=	=	=
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)

(1) Range

WiSAT = Air-cooled liquid chiller with inverter compressors

(2) Size

45 = Nominal compressor capacity (HP)

(3) Compressors

.4 = Compressor quantity

(4) Energy version

EXC = EXCELLENCE Version (standard)

PRM = PREMIUM Version

(5) Acoustic configuration

SC = Acoustic configuration with compressor soundproofing (standard)

LN = Silenced acoustic configuration

EN = Super-silenced acoustic configuration

(6) Condensing coil

CCM = Aluminum microchannel condensing coils (Standard)

CCME = E-coated microchannel coil

(7) Fan

VENDC = DC high efficiency fans (standard)

(8) Hydronic unit on the user side

(-) Not required (standard)

1PM = Hydropack with N° 1 pump

1PMH = Hydropack with N° 1 high static pressure pump

1PMV = Hydropack with N° 1 inverter pump

1PMVH = Hydropack with N° 1 high static pressure inverter pump

1P1SB = Hydropack with N° 1 pump + N° 1 in stand-by

1PAP+S = Hydropack with N° 1 high static pressure pump + N° 1 in stand-by pump

1P1SBV = Hydropack with N° 1 inverter pump and N° 1 stand-by pump with dedicated inverter

1PAPSV = Hydropack with 1 high head inverter pump and 1 stand-by pump with dedicated inverter

(9) Storage tank

(-) not required (standard)

ACC = Storage tank

(10) Energy recovery

(-) not required (standard)

D = Partial energy recovery

ACC	Storage tank Steel storage tank complete with double layer covering with closed-cell insulation, stainless steel anti-freeze immersion resistance, bleed valve, draw off cock, cast-iron shut-off butterfly valve with quick connections and activation lever with a mechanical calibration lock at the evaporator output, quick connections with insulated casing. The water tank capacity is 300 litres for sizes 45.4 to 60.4. The water tank capacity is 500 litres for sizes 65.4 to 90.4. The device is installed and wired on the unit and is located on the system's return line.
CMSC13	Serial communication module ModBus TCP/IP, BACnet/IP, BACnet MS/TP This enables the serial connection of the supervision system, using ModBus TCP/IP, BACnet/IP, BACnet MS/TP as the communication protocol. It enables access to the complete list of operational variables, commands and alarms. Using this accessory every unit can dialogue with the main supervision systems. The device is installed and wired on the unit.  The configuration and management activities for the BACnet networks are the responsibility of the client.  The total length of each individual serial line must not exceed 1000 m and the line must be connected in bus type (input/output).
CCME	E-coated microchannel coil The full aluminium microchannel coil is completely treated by electrolysis so as to create a protective layer of epoxy polymer on the surface, with the following characteristics: <ul style="list-style-type: none">over 3000 hours of protection against salt spray (ASTM G85 A3 - SWAAT);over 2000 hours of protection against UV rays (ASTM G155-05a) provide a very high resistance against corrosion.
PGFC	Finned coil protection grilles The grilles protect the external coil from accidental contact with objects or persons. Ideal for installation in places where persons can pass from, such as car parks, terraces, etc.
PGCCH	Anti-hail protection grilles Grille made of electro-welded and painted drawn steel suitable for protecting the external coil from hail damage. Accessories supplied and installed on the unit.
RPR	Refrigerant leak detector The leak detector device, in-built on the unit and positioned inside the compressor compartment, detects leaks from the internal refrigeration circuit.
REMAU	Additional board for advanced functions management Multifunction board installed in the electrical panel of the unit for the advanced functions management. The available digital contacts allow the following remote functions: <ul style="list-style-type: none">remote on/offDouble set-point managementSgready functionEVUlock functionDemand limitActivation of silent or super-silent acoustic version (selectable on the user interface) The additional board does not allow the simultaneous use of digital inputs and Modbus signal.
ABU	Water connections flush with the unit are required The water connections of the unit in standard configuration (without hydronic groups installed on board, or accumulation tank or DHW switching valve), end at the plate heat exchanger. It is necessary to select this option if water connections flush with the unit are required. If hydronic groups or buffer tank or DHW switching valve are selected, the ABU option is automatically selected.

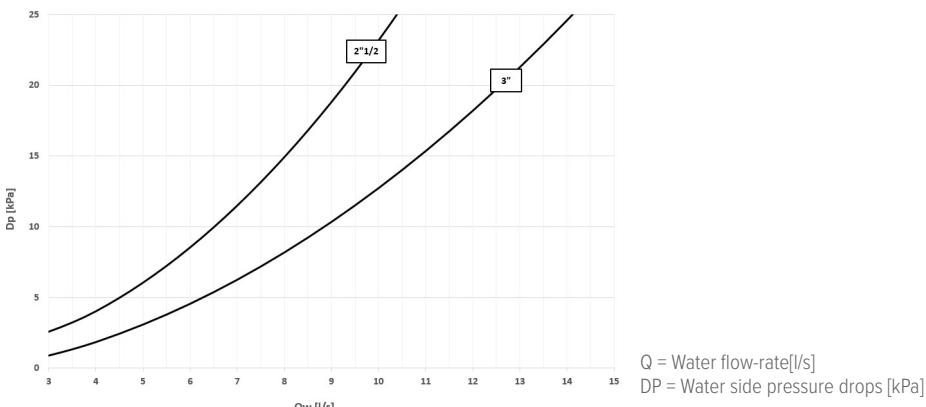

Accessories separately supplied

IFWX

Steel mesh strainer on the water side

The device prevents any impurity in the hydraulic circuit from soiling the exchanger. The stainless steel mesh mechanical filter must be placed on the water inlet line. It needs to be easy to remove for periodical maintenance and cleaning operations. The Victaulic filter water connections are 2" 1/2 for sizes 45.4 to 60.4 and 3" for sizes 65.4 to 90.4.

Filter pressure drop

AVIBX

Anti-vibration mount support

The rubber antivibration mounts are attached in special housing on the support frame and serve to smooth the vibrations produced by the unit, thus reducing the noise transmitted to the support structure.

AMMSX

Anti-seismic spring antivibration mounts

The anti-seismic spring antivibration mounts must be fastened in special housings on the supporting metal struts. The containment structure is designed to ensure high resistance multidirectional forces acting on the surface of the unit in the presence of wind and / or telluric movements. The antivibration mounts have been tested according to ANSI/ASHRAE standard 171-2008 (Method of Testing Seismic Restraint devices for HVAC&R Equipment). The performance levels and test methodology have been validated and certified by Lloyd's Register.

⚠ Installation is a responsibility of the Customer.

PGFCX

Finned coil protection grilles

The grilles protect the external coil from accidental contact with objects or persons. Ideal for installation in places where persons can pass from, such as car parks, terraces, etc.

PGCCHX

Anti-hail protection grilles

Grille made of electro-welded and painted drawn steel suitable for protecting the external coil from hail damage.

IOTX

IoT industrial module for cloud based interoperability & services

This device allows the monitoring and the remote control the unit via Clivet Eye, the supervision cloud system for Clivet units.

With IoT module (i-LINK) it will be possible to monitor and manage the unit through the mobile app Clivet Eye and the dedicated web page.

Among the main functions, for all monitored units they allow to:

- display the main working parameters;
- display the alarms;
- switch on/off the unit;
- change the setpoint;
- change the operating mode;
- set the daily/weekly start-up or power-off programming of the unit;
- create charts of main system parameters trend (via web interface);
- display in a map the units monitored by Clivet Eye (via web interface).

Web interface at www.cliveteye.com.

Clivet Eye app available in Google Play and Apple Store

⚠ IoT module to be provided for each unit to be remotely monitored.

⚠ Internet ethernet connection in charge of customer.

⚠ Clivet Eye management is alternative to an external BMS supervision system.

⚠ Installation is a responsibility of the Customer.

II The Product complies with the European ErP Directive (Energy Related Products), which includes the Commission Regulation (EU) 2016/2281, also known as Ecodesign LOT21.

Contains fluorinated greenhouse gases (GWP 675)

1. Data referring to the following conditions: Water temperature to the internal exchanger = 12/7 °C. Temperature of air entering the external exchanger = 35°C. Evaporator fouling factor = $0.44 \times 10^{-4} \text{ m}^2 \text{ K/W}$
2. The Total Power Input value does not take into account the part related to the pumps and required to overcome the pressure drops for the circulation of the solution inside the exchangers.
3. Recovery exchanger water = 40/45°C
4. Data compliant to Standard EN 14511:2022 referred to the following conditions: internal exchanger water temperature = 12/7 °C. Entering external exchanger air temperature = 35°C
5. Data calculated in accordance with AHRI 550/590 under the following conditions: Water temperature to the internal exchanger = 6.7 °C. Water flow-rate 0.043 l/s per kW. Temperature of air entering the external exchanger = 35°C. Evaporator fouling factor = $0.18 \times 10^{-4} \text{ m}^2 \text{ K/W}$
6. Data calculated in compliance with EN 14825:2018.
7. Data compliant according to EU regulation 2016/2281

Sound levels refer to full load units, in test nominal conditions. The sound pressure level refers to 1 m. from the standard unit outer surface operating in open field. Measures according to UNI EN ISO 9614-2 regulations, with respect to the EUROVENT 8/1 certification, which provides for a tolerance of 3 dB(A).

Data referred to the following conditions:

- cold side exchanger water temperature = 12/7 °C
- Entering external exchanger air temperature = 35°C

General technical data

kWf = cooling capacity in kW

kWe_tot = Total power input in kW

To (°C) = Internal exchanger outlet water temperature

Performances in function of the inlet/outlet water temperature differential = 5°C

*Always check the actual temperature differential in the configurator as this is related to the minimum or maximum flow rate limits of the exchanger

Cooling - Excellence - LN

KWf = cooling capacity in kW

kWe_tot = Total power input in kW

To (°C) = Internal exchanger outlet water temperature

*Always check the actual temperature differential in the configurator as this is related to the minimum or maximum flow rate limits of the exchanger

Performances in function of the inlet/outlet water temperature differential = 5°C

kWf = cooling capacity in kW

kWe_tot = Total power input in kW

To (°C) = Internal exchanger outlet water temperature

Performances in function of the inlet/outlet water temperature differential = 5°C

*Always check the actual temperature differential in the configurator as this is related to the minimum or maximum flow rate limits of the exchanger

Performance

Plate exchangers pressure drop (EVPHE) - Excellence

The pressure drops are calculated considering a water temperature of 7°C

Q = Water flow-rate[l/s]

DP = Water side pressure drops [kPa]

The water flow-rate must be calculated with the following formula

$$Q \text{ [l/s]} = kW_f / (4,186 \times DT)$$

kW_f = cooling capacity in kW

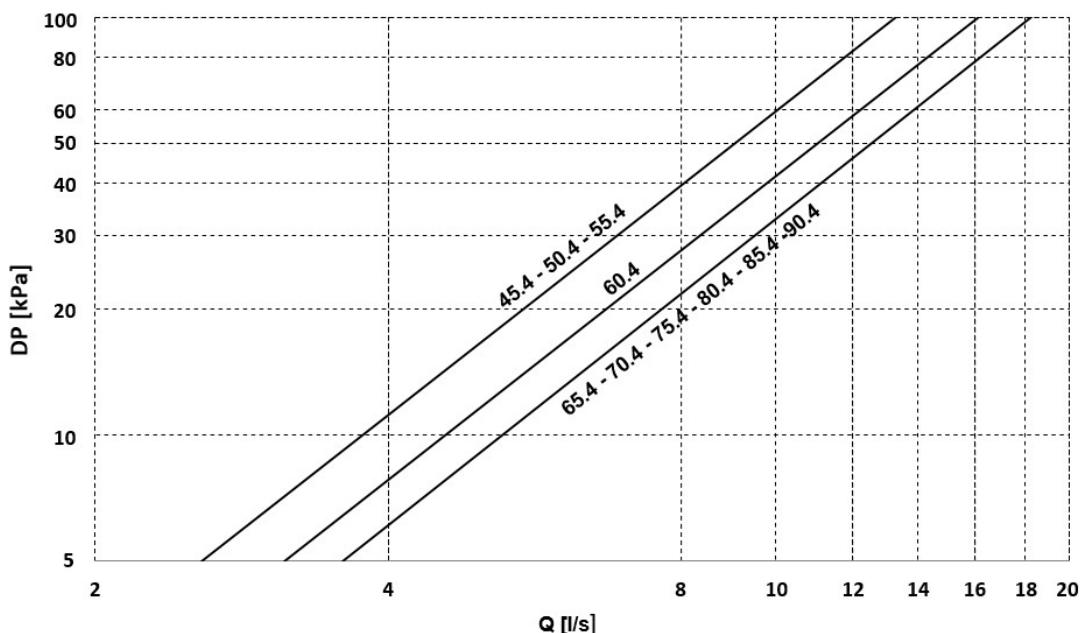

DT = Temperature difference between inlet / outlet water

Admissible water flow-rates

Minimum (Qmin) and maximum (Qmax) admissible water flow rates for correct operation of the unit.

SIZE	45.4	50.4	55.4	60.4	65.4	70.4	75.4	80.4	85.4	90.4

Load = % of cooling capacity compared to the value at full load

kWf = cooling capacity in kW

kWe_tot = Total power input in kW

Internal heat exchanger water temperature = outlet 7°C / inlet 12°C / variable flow-rate with external exchanger air T.

Cooling at part load - Excellence - LN

Load = % of cooling capacity compared to the value at full load

kWf = cooling capacity in kW

kWe_tot = Total power input in kW

Internal heat exchanger water temperature = outlet 7°C / inlet 12°C / variable flow-rate with external exchanger air T.

Configurations

D - Partial energy recovery

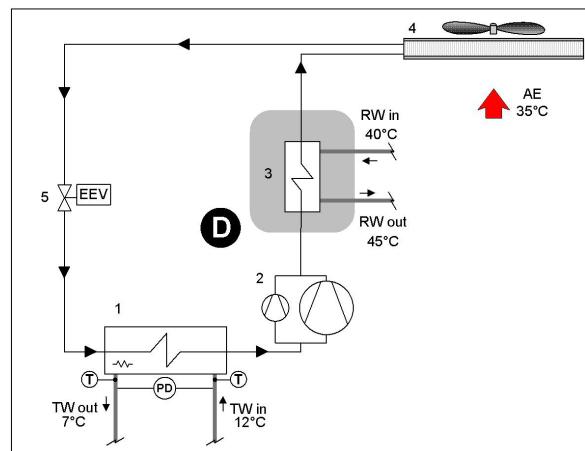

A configuration which enables the production of hot water free-of-charge while operating in the cooling mode, thanks to the partial recovery of condensation heat that would otherwise be disposed of into the external heat source.

This option is also known as "desuperheater". It is made up of a Inox 316 stainless steel brazed plate heat exchangers, suitable for recovering a part of the capacity dispersed by the unit (the dispersed heating capacity is equal to the sum of the cooling capacity and the electrical input capacity of the compressors).

The partial recovery device is considered to be operating when it is powered by the water flow which is to be heated. This condition improves the unit performance, since it reduces the condensation temperature: in nominal conditions the cooling capacity increases indicatively by 3.2% and the power input of the compressors is reduced by 3.6%.

When the temperature of water to be heated is particularly low, it is necessary to control the flow-rate to maintain the outlet temperature at recovery above 35°C and prevent condensation of the refrigerant in the partial energy recovery device.

The water connections of the partial energy recovery device are 1" 1/4 for all sizes.

Accessories - Hydronic assembly

1PM - HydroPack with N° 1 pump

Pumping group consisting of an electric centrifugal pump with cast iron pump body and stainless steel or cast iron impeller (depending on the model).

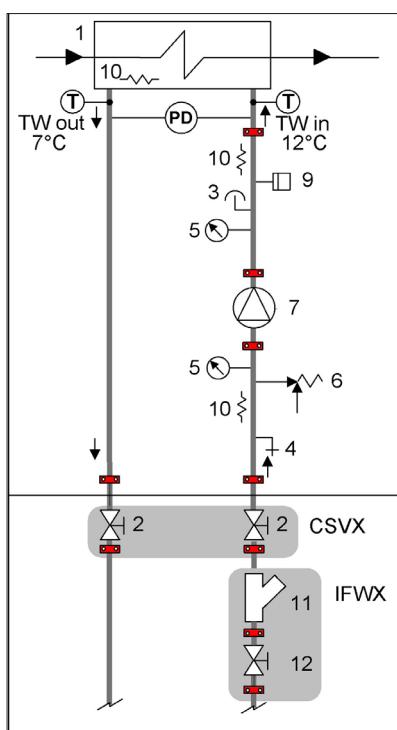

Mechanical seal using ceramic, carbon and EPDM elastomer components.

Three-phase electric motor with IP55 protection rating. Complete with thermoformed insulating casing, quick-release couplings with an insulated casing, safety valve, pressure gauges, system load safety pressure switch, stainless steel immersion antifreeze heaters fitted on the supply and suction lines.

All the water connections are Victaulic.

Option supplied on the unit.

Power input

Accessories - Hydronic assembly

1PMV - User side Hydropack with 1 inverter pump

Pumping group consisting of an electric pump controlled by inverter to adapt to different conditions of use.

It enables the automatic reduction of the liquid flow-rate in critical conditions, avoiding blocks due to overloading and consequential intervention work by specialised technical personnel.

Through the inverter calibration, standard supplied, it is possible to adapt the pump flow-rate/head to the installation feature.

Centrifugal electric pump with the pump body made of cast iron and the impeller made stainless steel or cast iron (depending on the models)

Mechanical seal using ceramic, carbon and EPDM elastomer components.

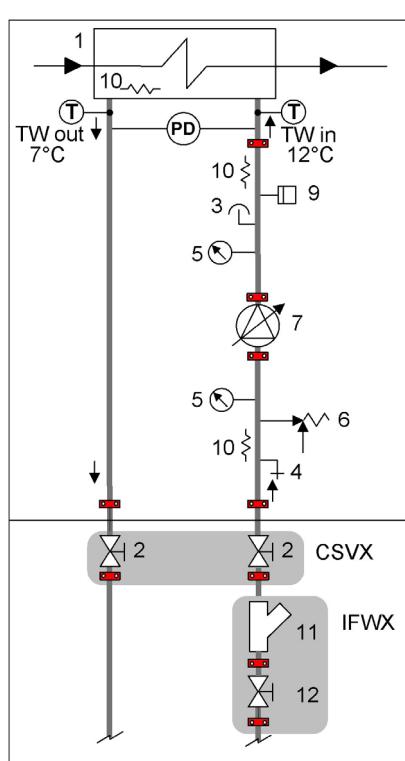

Three-phase electric motor with IP55 protection rating. Complete with thermoformed insulating casing, quick-release couplings with an insulated casing, safety valve, pressure gauges, system load safety pressure switch, stainless steel immersion antifreeze heaters fitted on the suction and supply lines.

In combination with the "IVFDT" - Variable flow-rate control option, it allows variation of the water flow-rate to the system under partial-load to achieve the highest unit efficiency and lower consumption of the pumping group.

All water fittings are Victaulic.

Option supplied on the unit.

Centrifugal electric pump with the pump body made of cast iron and the impeller made stainless steel or cast iron (depending on the models)

Mechanical seal using ceramic, carbon and EPDM elastomer components.

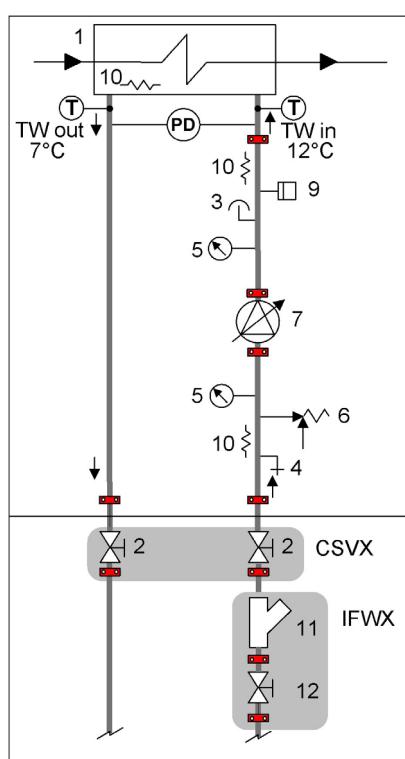

Three-phase electric motor with IP55 protection rating. Complete with thermoformed insulating casing, quick-release couplings with an insulated casing, safety valve, pressure gauges, system load safety pressure switch, stainless steel immersion antifreeze heaters fitted on the suction and supply lines.

In combination with the "IVFDT" - Variable flow-rate control option, it allows variation of the water flow-rate to the system under partial-load to achieve the highest unit efficiency and lower consumption of the pumping group.

All water fittings are Victaulic.

Option supplied on the unit.

1PAPSV - User side Hydropack with 1 high head inverter pump and 1 standby pump with dedicated inverter

Pumping group consisting of 1+1 electric pump (1 stand-by) controlled by inverter to adapt to different conditions of use.

It enables the automatic reduction of the liquid flow-rate in critical conditions, avoiding blocks due to overloading and consequential intervention work by specialised technical personnel.

Through the inverter calibration, standard supplied, it is possible to adapt the pump flow-rate/head to the installation feature.

Centrifugal electric pump with the pump body made of cast iron and the impeller made stainless steel or cast iron (depending on the models) Mechanical seal using ceramic, carbon and EPDM elastomer components.

Three-phase electric motor with IP55 protection rating. Complete with the

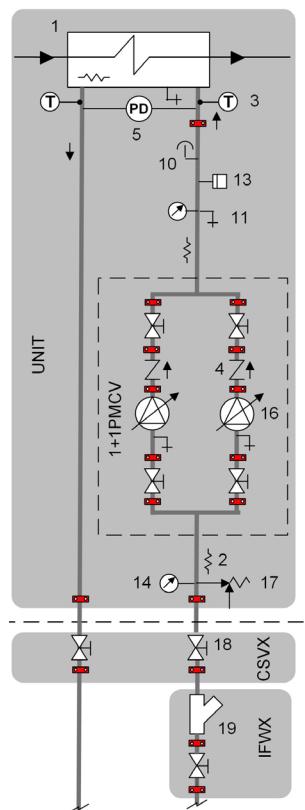

Three phase electric motor with IP 55 protection rating. Complete with thermofused insulating casing, quick release couplings with an insulated casing, safety valve, pressure gauges, system load safety pressure switch, stainless steel immersion antifreeze heaters fitted on the suction and supply lines.

In combination with the "IVFDT" - Variable flow-rate control option, it allows variation of the water flow-rate to the system under partial-load to achieve the highest unit efficiency and lower consumption of the pumping group.

Features and options

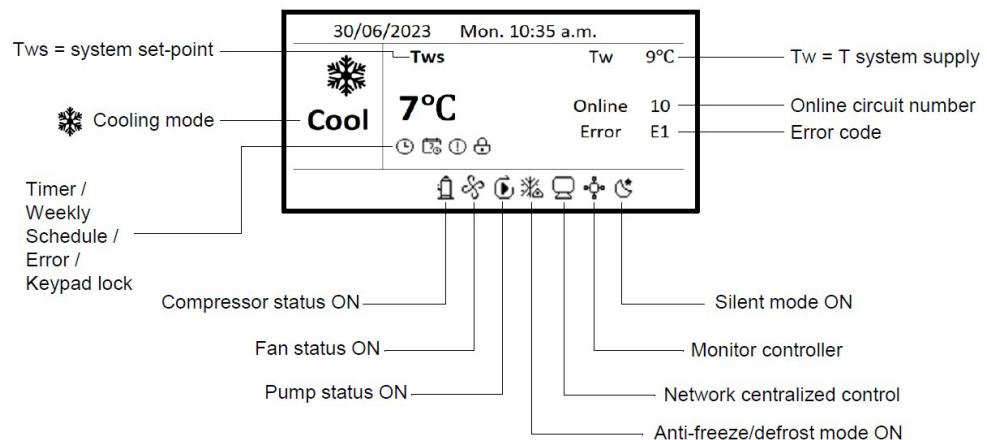

User interface (HMI)

Resolution	1°C	
Temperature sensor	NTC 5k 1%	
Power input	< 1 W	
Storage temperature	-20÷50°C	
Communication	RS485	
Wiring	Type MAX Length	Shielded cable 40 m

The unit is equipped with a user interface (HMI) installed on board, to be used for managing the functions and equipped with an integrated temperature probe.

The user interface comes standard with 22 selectable languages: Italian / English / French / Spanish / Polish / Portuguese / German / Dutch / Romanian / Russian / Turkish / Greek / Swedish / Slovenian / Czech / Slovakian / Bulgarian / Serbian / Danish / Ukrainian / Hungarian / Croatian

Features and options

Double Set-Point function

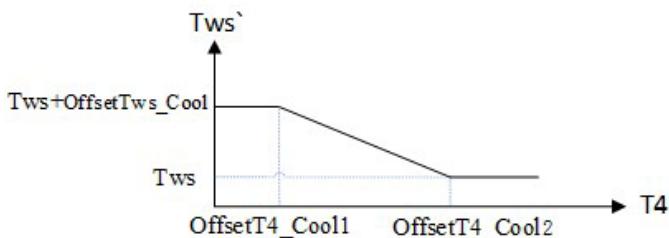

It allows to enable the Double setpoint function with HMI. Once enabled, you need to configure the first target water temperature (SetPoint1) and second target water temperature (SetPoint2). At this point the unit detects the closed status of the Double_SP door (normally open). If the contact is open, the unit will operate at the first target water temperature; otherwise, it will operate at the second target temperature.

Set-Point compensation function based on the outside air temperature

Allows to enable the temperature compensation function via HMI. Once the function has been enabled, it is necessary to set:

- The two offset points for the external air temperature (OffsetT4_1; OffsetT4_2), which will define the external air temperature field on which the set-point variation will take place;
- The offset point for the water production temperature (OffsetTws) which represents the maximum variation of the set-point allowed. Consequently the unit will update the proportional set-point according to the calculation cycle of the compensation function.

Example of temperature compensation in heating

- When the external air temperature ($T4$) is lower than the offset one ($T4 < \text{OffsetT4_Cool1}$) the set-point remains unchanged
- When the external air temperature ($T4$) is between the two offset temperatures ($\text{OffsetT4_Cool1} \leq T4 < \text{OffsetT4_Cool2}$), the set-point is reduced in direct proportion to the increase in external air temperature.
- When the outside air temperature ($T4$) is higher than the highest offset temperature ($T4 \geq \text{OffsetT4_Cool2}$) there will be the maximum reduction in the set-point temperature.

ENEMON function

Through the HMI it is possible to access the display of the main energy parameters of the displayed circuit and in detail

Power Output = instantaneous power produced in kW

Power Input = instantaneous power absorbed in kW

Current efficiency = instantaneous efficiency represents the EER or the COP

Total energy production is the cumulative energy produced in MWh

The total energy input is the cumulative energy input in MWh

STATE QUERRY	
POWER OUTPUT	100 KW
POWER INPUT	50 KW
CURRENT EFFICIENCY	2
TOTAL ENERGY OUTPUT	10 MWh
TOTAL ENERGY INPUT	3 MWh
BACK	2/2

All energy meter display items are available via Modbus, on addresses from 232+(Circuit adress)*100 a 236+(Circuit adress)*100.

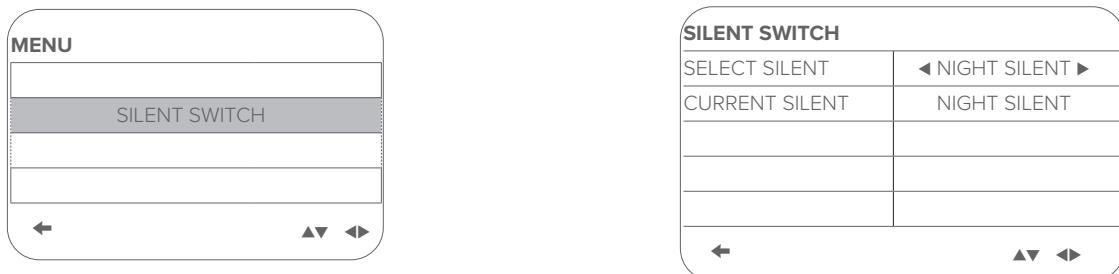

Features and options

SILENT function

The function allows to select up to four acoustic modes, for maximum sound configurability of the units. For three of these modes, Standard, Silent and Supersilent, the heating/cooling capacity, efficiencies and sound levels of all sizes are shown in the general technical data section of the bulletin, as well as on the navigator.

The Night Mode configuration, on the other hand, allows for a further reduction in the sound level of up to 3 dB(A) compared to the supersilent mode, for an even lower acoustic impact of the unit.

To select the mode of interest, simply set it from the HMI through the User menu as shown in the following screen.

Smart Grid & EVU functions (REMAU option required)

The unit is certified Smart Grid Ready and is equipped with logic for connection to devices that balance the loads connected to the electric grid and optimize general electricity consumption. The connection is optional, the function can be enabled from the REMAU and is linked to the ON/OFF SG input, which receives a status signal from the electrical network.

The regulation logic of the contacts SG and EVU is:

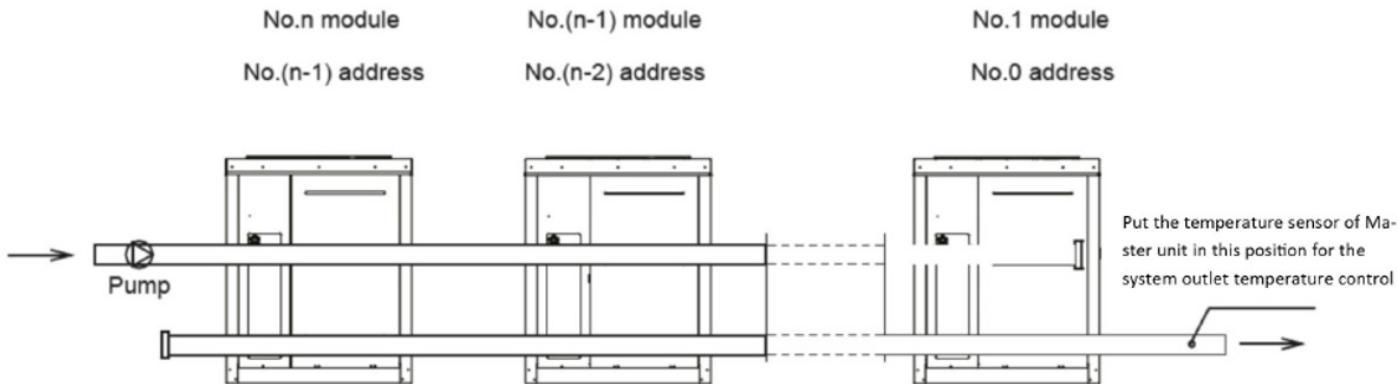

CONTACT		OPERATION
SG	EVU	SYSTEM
ON	ON	ON forced
OFF	ON	OFF forced
OFF	OFF	Standard
ON	OFF	Standard

Features and options

Modularity

Many applications require drives to be installed as back-up to the main system or have loads that can change significantly during annual operation.

Through this function, without the aid of further accessories, it is possible to operate with up to 8 units hydraulically connected in parallel. From the user interface of the unit defined as Master, the other units are electrically connected in series through the dedicated terminals P, Q and E. Each connected module is identified by an address, from 0 to 15: the Master unit is identified as 0. Complete control of the system (including ancillary elements such as external pumping system and auxiliary heater) is handled by the Master unit.

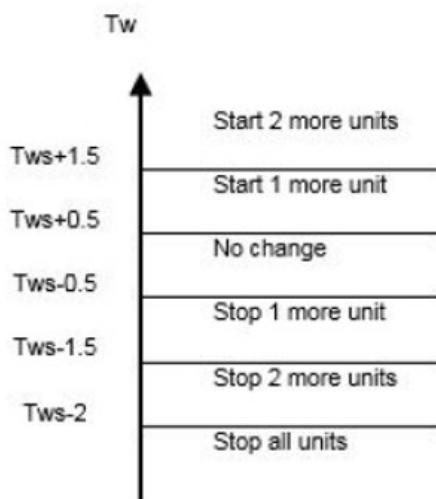

Operation

The Master unit calculates the required cooling capacity of the system based on the water delivery temperature and the temperature set-point. Instead, each individual unit calculates its required cooling capacity based on the delivery and return temperatures. The activation of the units takes place according to the last in first out logic (the last unit to be activated will also be the first to be deactivated) and is indicated in the following two figures.

- T_w = Water supply temperature
- T_{ws} = Water supply temperature set-point

Cooling mode

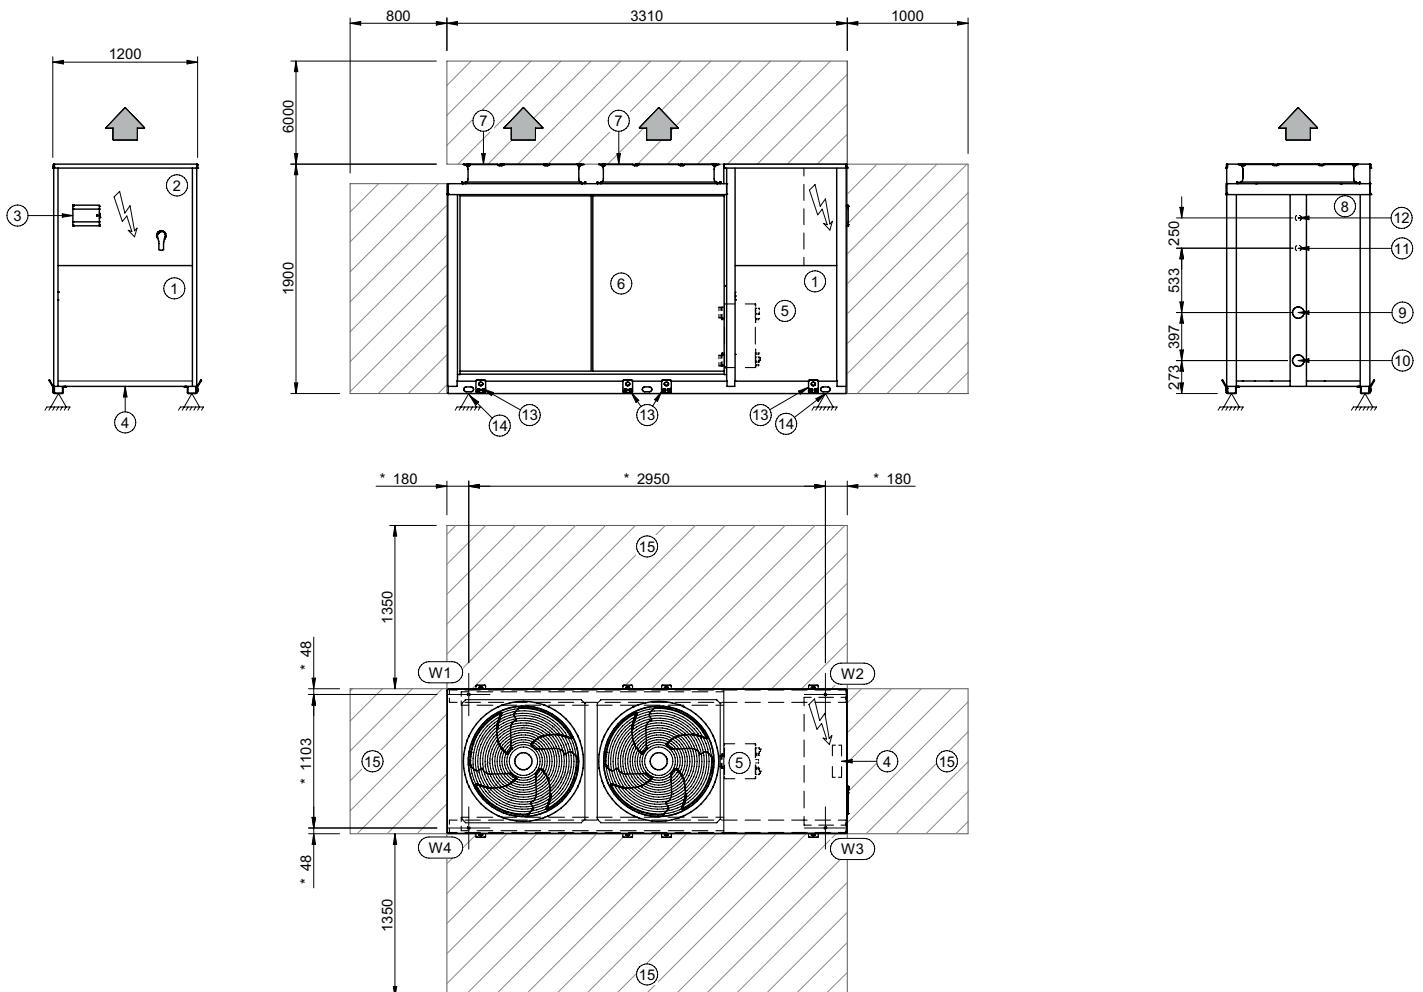

In cooling mode, if $T_w \geq T_{ws} - 10^\circ\text{C}$ 50% of the system units are activated.

After having satisfied the system load and having deactivated the units, at the next start-up the first unit to have been deactivated will be the first to be started, in order to guarantee the correct balancing of the operating hours.
